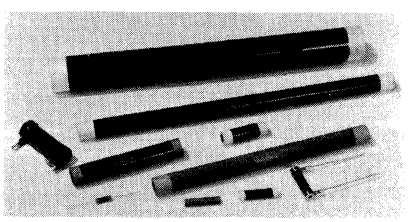
SERIES 800 AND 1000

This general line is available in a wide variety of sizes and terminations. They retain the non-inductive and heavy load characteristics of all Carborundum ceramic resistors. These resistors can handle up to 1000 watts, 165 KJ and 165 KV in resistance values from 1 ohm to 1 megohm.



Parts are specified by the four or five character type number (for example 885SP, 888AS, 890A), the first two digits of the resistance, a single digit to indicate the power of ten multiplier, and a "J" for ±5%, a "K" for ±10%, or an "L" for ±20%. Where the resistance is less than ten ohms, the power of ten multiplier is not used, and an "R" replaces the decimal point. Thus R50 = 0.50 ohm, 7R5 = 7.5 ohm, 220 = 22.0 ohm, 152 = 1500 ohm, etc. *Type AS with a suffix letter to part number denotes optional construction: "D" for dielectric coating; "O" for oil application; "N" for No Arc terminal. Consult Customer Service for additional options and part number detail. A typical part number would be 886AS501KD. This represents a type AS resistor, 5" long x ¾" diameter, 500 ±10% ohms, with dielectric coating.

Termination and Mounting

Electrical connection to the resistive bodies of resistors is made by flame-sprayed metal end bands. The standard metal is aluminum for type SP, nickel or silver for types AS and A. Special terminations of brass or copper overspray or tinned ends are readily available specials. Add "B," "C," or "T" respectively to the part number to designate these special terminations.

In most cases, connections to the resistors may be made by stock clips such as these:

TYPE AS EPOXY COATED STYLE

Carborundum Type AS High-Energy Ceramic Resistors are available with an epoxy coating which protects the resistors body from contaminants. It is especially useful where the resistor is employed in an application where it is not protected from a dirty ambient atmosphere or where it is immersed in a cooling or dielectric fluid. Energy level in oil should not exceed 300 joules/cc.

The overall length, L, of the coated resistor is approximately 0.25" longer than the uncoated part; the diameter, D, is approximately 0.30" greater. Coated resistors are also available with an axial mounted tab.

Surface-Mount Resistor Networks

State of the Art produces a variety of surface mount resistor and resistor/capacitor networks. These devices feature thick film materials on alumina substrates, providing good thermal management and electrical stability. The standard "lead" configuration is a pretinned wrap-around with NICKEL BARRIER, offering excellent resistance to leaching in rigorous soldering applications such as reflow and vapor phase. For high volume applications where maximum economy is needed, top surface only terminations are available.

CUSTOM DESIGNS

State of the Art can produce a variety of custom network designs for surface mount applications. Using the SLAMDIP, JEDEC, or non-JEDEC style substrates, the individual resistors can be altered to suit the need; other resistance patterns can be applied — limited only by what can be put into the available space.

We can also produce other substrate designs. Custom length, width, and "lead" configuration can be provided. Please contact State of the Art's engineering department for information and quotations. Tooling for special networks is not expensive.

SLAMDIP RESISTOR NETWORK

When State of the Art's "SLAM DIP" resistor network replaces individual chip resistors, you will save space and reduce your placement labor. Other benefits also surface, such as better tracking and lower board cost.

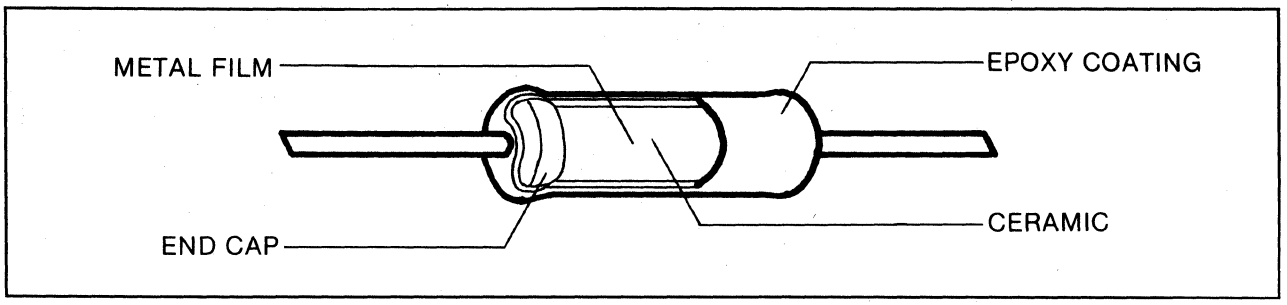
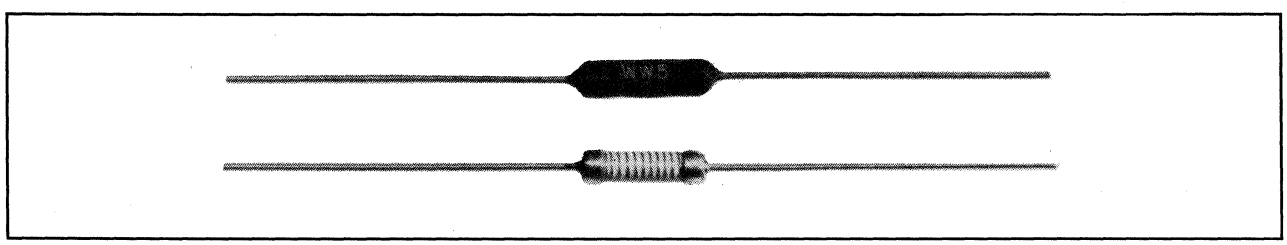
METAL FILM RESISTORS TYPE-LM EPOXY COATED



VPR type-LM Epoxy Coated Metal Film Resistors have been designed not only to meet but also surpass the specifications of MIL-R-10509 characteristics C, E, and F. The resistors feature a high evaporation of metal alloy on ceramic substrate with gold end bands. These resistors are then finished with coatings of exclusive silicon epoxy coating and paint. Special techniques and methods are used in every step of the process to ensure the lasting reliability of the type-LM Metal Film Resistors with built-in low noise and low failure rate characteristics.

VPR Type-LM Metal Film Resistors are available in 1/8, 1/4, 1/2, watt size; with 0.1%, 1/4%, 1/2% or 1% tolerance; and temperature coefficient ±5, ±10, ±25, ±50, or ±100 parts per million per degree centigrade.

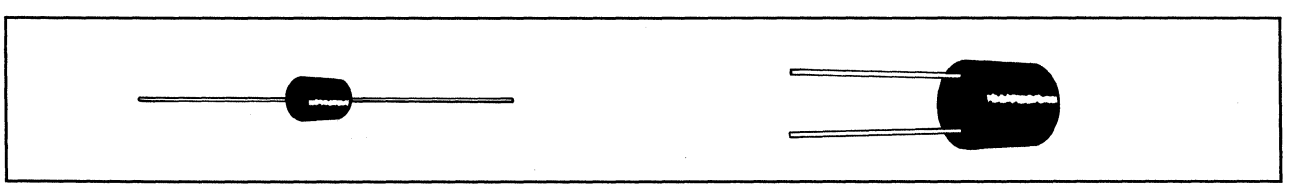
WIREWOUND RESISTORS TYPE WW SILICONE COATED



The VPR WW Series are axial lead, silicone coated precision resistors. These parts are controlled stress wound on centerless ground cores of high quality alumina. The caps are welded to the resistive element, then copper-weld leads are welded to the caps. The body of the resistor is conformally covered with an exceptionally high temperature silicone coating. Modern production equipment allows competitive pricing and superior quality.

Tolerances of the WW Series range through all the standard groupings from 5% down to .05%. Our standard temperature coefficients are ±90 PM on Values up to 1 ohm and ±20 PM on values above 1 ohm. These parts meet & exceed MIL R-26E.

ULTRA-PRECISION WIRE-WOUND RESISTORS



VPR's ultra-precision resistors should be used wherever there is a requirement for extremely tight tolerances, temperature coefficients or a combination of both. These resistors are wound on bobbins of molded epoxy with a single strand of nickel-chromium wire. This wire has no soldered or welded splices that will cause problems after the circuit is in the field. All parts are wound on reversed pi segmented bobbins to eliminate any inductance.
Tension is controlled and kept to a minimum while the winding process takes place to keep out any possible fatigue problems. The windings are then relieved of stresses by extensive aging before calibration and termination operations.
The resistors are given a silicon buffer coat before the final epoxy molding occurs, resulting in a case size that is extremely consistent from part to part. Available in axial or radial leads.

Resistance Tolerances (Most Sizes): 1%; 0.5%; 0.25%; 0.1%; 0.05%; 0.025%; 0.01%.
Temperature Coefficient: 100 ohms and up: 10 PPM/°C; 10 to 100 ohms: 20 PPM/°C; below 10 ohms: 30 PPM/°C.

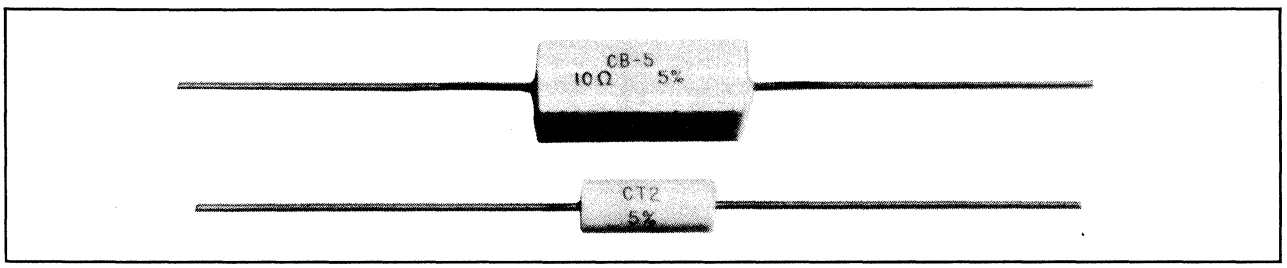
SEMI PRECISION POWER WIREWOUND RESISTORS FLAMEPROOF / FUSABLE



VPR CT & CB Series resistors are manufactured to exacting specifications. A resistive element is wound around a fiberglass core by precision winders insuring uniform windings. Wire leads and caps are secured to the resisting element. The assembly is then installed in a fireproof ceramic tube or boat sealed with an especially formulated silicone compound. This provides excellent heat dissipation as well as single unit construction. A rigid QC program assures our customer that each part manufactured is to our specifications which eliminates costly customer rejects.

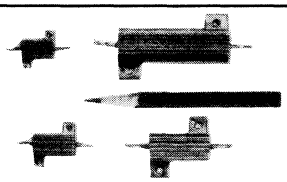
FIREPROOF INORGANIC CONSTRUCTION

VPR makes available Type CB & CT wirewound resistors in ten ratings: 1, 2, 3, 5, 7, 10, 15, 18, 22 and 25 watts.

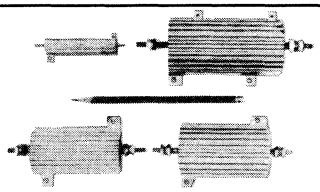
APPLICATIONS:

Type CB or CT wire resistors are recommended:
• In circuits where a wirewound resistor is required with a wattage dissipation equal to or less than the wattage rating of the CB or CT resistor selected. • For operation at a high ambient temperature. • For radio, TV or industrial circuits requiring the wattage dissipations, and where a fireproof resistor is essential. • In medium to high power bridge circuits requiring balanced pairs. • In power attenuator networks. • Wherever a low-cost, easily installed resistor is required. • In special applications requiring positive temperature coefficient, such as transistor stages. • Applications where a CB or CT fusible resistor will replace both fuse and resistor, consult factory.

PRECISION POWER RESISTORS 5 through 250 Watts



5W Through 50W Compared To A Normal Pencil



70W Through 250W Compared To A Normal Pencil

The KAL series resistors are designed for high power dissipation with precision tolerances in a minimum of physical size. They provide extremely efficient heat dissipation by mounting solidly to a metal chassis surface for maximum heat transfer.

GENERAL SPECIFICATIONS:

• Low hot spot ratings due to exclusive complete encapsulation of the resistive element within the anodized aluminum body. • Welded construction throughout assures long stable load life. • Copperweld leads are hot tin dipped for solderability. Heavy spade lug type leads are used on the 5 through 70 watt sizes, threaded heavy stud terminals are used on the 100 through 250 watt sizes. • Extruded aluminum housings are used for maximum heat dissipation. • Cores are centerless ground for uniformity.

ELECTRICAL SPECIFICATIONS:

• Resistance Range—.05Ω to 275KΩ • Tolerances—from 5% to .05%. • Temperature Coefficient—20PPM, slightly higher on low value resistors. Different TCs are available on special order. • Minimum dielectric strength—1,000 VAC through 10 watts, 2,500 VAC through 70 watts, 5,500VAC through 250 watts. • Operating temperature range— −55°C to +275°C • Stability—as low as .001% per annum.

VICTOREEN RX-1 HI-MEG Resistors

- **Available resistances to 10,000,000 megohms**
- **Glass sealed hermetic resistors**

VICTOREEN HI-MEG RESISTORS were originally designed for use in electrometer circuits where a high order of performance is required. **HI-MEG** resistors achieve a high degree of accuracy and stability, and operate at this high level for a long period of time. The **HI-MEGS** are manufactured in accordance with **MIL-R-14293A,** characteristic T, and are measured at 5 volts. Reference to the typical voltage coefficient table below will indicate what deviations from the marked resistance value may be encountered when used at high voltages. By special order, Victoreen can supply resistors with resistance measurements at specified voltages.

GLASS SEAL: HI-MEGS are vacuum sealed in a glass envelope which is treated with a special silicone varnish to keep the resistor relatively free from the effects of moisture. Care should be exercised, however to avoid contamination in handling, such as fingerprints, which might result in reduced effective resistance.

NOISE: The noise level is negligible for most uses.

POWER RATING: 1/2 watt @ 25°C.

RESISTANCE: HI-MEG resistors are available in values from 10^7 to 10^{13} ohms.

TOLERANCE: HI-MEG resistors can be supplied in the following tolerances: 1% below 2.5 x 10^{11} ohms, 2% and 5% below 10^{12} ohms, 10% below 10^{13} ohms and 20% at 10^{13}.

MAXIMUM WORKING VOLTAGE: 1000 volts.

MAXIMUM OPERATING AMBIENT TEMPERATURE: 100°C.

VICTOREEN RX-1 HI MEG resistors are commonly used for high resistance standards. By special order, Victoreen can calibrate these resistors at any voltage from 1 to 1000 volts. (Preference to decade multiples of 1, 2.5, and 5.)

PRECISION SURFACE MOUNT CHIP RESISTORS

±0.6 ppm/° C TCR ■ 0.01% Tolerance ■ Very High Stability
Designed to Exceed Requirements of MIL-R-55342

VISHAY VSM resistors offer an-order-of magnitude improvement in performance over other surface mounted chip resistors. Until now, the best chips available had a ±50 ppm/°C (–55°C to +125°C) Temperature Coefficient of Resistance (TCR); the VISHAY chips, however, exhibit a nominal TCR of only +2.2 ppm/°C over the temperature range of -55°C to +25°C and -1.8 ppm/°C from +25°C to +125°C. The VISHAY standard TCR spread from nominal is ±2.0 ppm/°C over the full temperature range. This TCR characteristic is accomplished automatically without selection and regardless of the date of manufacture - even if years apart! Selected TCR tracking is available to 0.5 ppm/°C. Where other chip resistors are, at best, supplied only as close as ±0.1% resistance tolerance, VISHAY surface mounted have standard resistance tolerances to ±0.01%.

VISHAY surface mounted precision chip resistors exhibit performance which dramatically exceeds the requirements of MIL-R-55342. In Trident passivation tests, VISHAY chips repeatedly showed no deterioration when exposed to destructive ceric annomium nitrate solutions (three 15 second etches), indicating a high order of protection and absence of "nichrome migration."

Hermetically Sealed "O" TCR Resistor

VHP-100, the New Improved VISHAY Thermotropic Resistor with Self-Correcting Resistance versus Temperature Performance

■ Essentially Zero TCR ■ No Humidity Effect ■ Lowest Thermal EMF in the Industry
■ Excellent Stability ■ Essentially Non-Inductive Performance

Self-correcting thermal stability is achieved by programming the resistance to change or turn in the desired direction in response to a specified stimulus (tropic); the stimulus in this case is the temperature (thermo). As temperature changes cause the resistance to move away from the desired ohmic value, the corrective factors reverse the direction of resistance change to restore the resistance to its initial desired ohmic value, a thermotropic phenomenon. The changing temperature, which normally increases the error, is used to reverse the temperature induced error and activate the self-compensating mechanisms which provide the thermal stability.

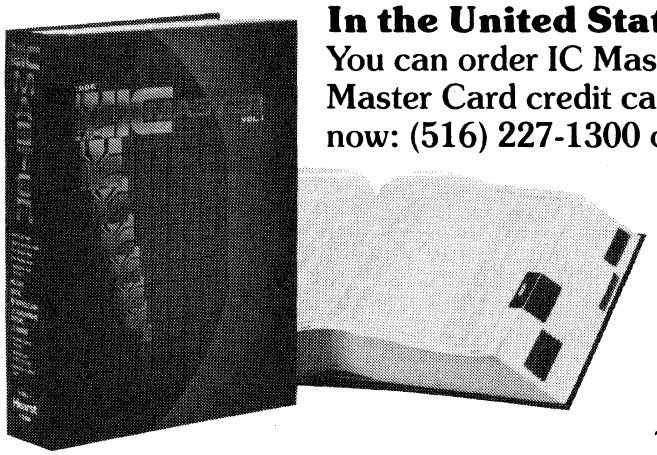
IC MASTER BELONGS ON YOUR BOOKSHELF

If you don't have your own IC MASTER, you can obtain your own copy by ordering now. Write for your own copy or order by telephone as described below.

IC MASTER is a two-volume set of technical data carefully organized to direct the engineer to the integrated circuits and related products that are closest to his specific needs. It is the surest and fastest way to find the optimum devices to answer an engineering design requirement. By ordering now, you won't have to borrow or search for IC MASTER the next time you need it.

Typical Use of IC MASTER
Can an engineer find out who makes a 256K dynamic RAM with an access time of 120 nanoseconds or faster in less than 30 seconds? He can if he turns to the Memory section of IC MASTER and looks for the 256K organization (words and bits per word) that he needs. Because each device is listed in order of access time, he can easily determine the devices that satisfy his speed requirements.



In the United States only:
You can order IC Master simply by charging it to your VISA or Master Card credit card. To place your order (USA only) call now: (516) 227-1300 or (408) 249-6800.

GET ORGANIZED!

Are your catalog files organized? Can you find any given catalog in a matter of seconds? If your answer is "Yes," you probably already have the EEM File System. But, if you said "No," you really ought to look into this simple system. It will save hours of time and tons of aggravation.

The EEM File System was invented over twenty-five years ago to help people who specify, buy, or work with electronic products and equipment. It is upgraded on a constant basis to reflect the current state of the art. It's easy to use and easy to customize to your particular needs.

You say you want to file catalogs by type of product? That's easy to do with The System. But, what are you going to do when there are multiple products in one catalog? Take Mallory for example. There are all kinds of products in the Mallory Short Form Catalog. With the EEM File System all you do is file the catalog under "M" for Mallory and refer to it on all of the cross reference cards that apply.

There are thousands of EEM File Systems in everyday use in engineering and procurement offices all over the world. Shouldn't you be using this proven system?

The EEM File System is shipped in one neat package. The package contains everything you need to set up your very own filing system. Best of all, it's easy to get and very affordable. Send a check or money order for $25.00 and EEM will pay the postage and sales tax. If you must use a purchase order, please add $5.00 for postage and handling. An invoice will accompany your System.

Don't waste any more time. Get organized now!

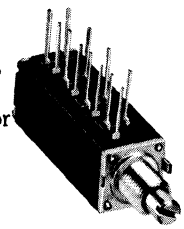
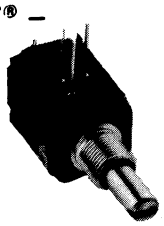
Series 70 MOD POT® – Modular design innovated by Allen-Bradley offers almost unlimited combinations: single, dual, triple or quadruple sections. Options include PC or solder lug terminals, variety of switches, vernier drives, concentric shafts, hot-molded composition, cermet or conductive plastic resistance elements.

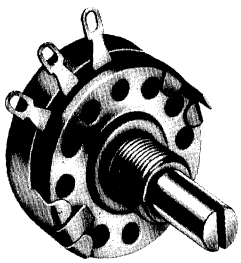


Series 72 MOD POT® – Similar to Series 70, except the bushing and shaft are non-metallic. Available in single or dual combination only.

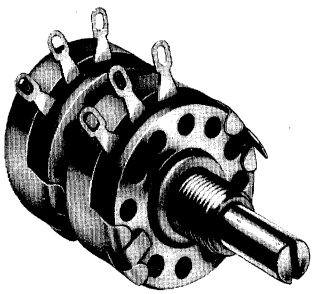
Series 73 MOD POT® – Similar to Series 70, except the bushing is of a more economical design. Available in single, dual, triple or quadruple sections.



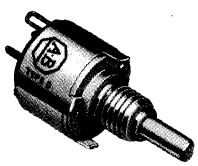
Type J (RV4 and 2RV7) – Standard of the industry for quality. Hot-molded composition, 50 ohms to 5 megs, ±10% and ±20% (special values to 1000 megs available), 2.25W at 70°C, single, dual, triple sections available. Switch for single or dual sections.



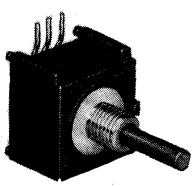
Type EJ – Extra long life version of the Type J with rotational life exceeding one million rotations, single or dual configurations. Slip clutch available.



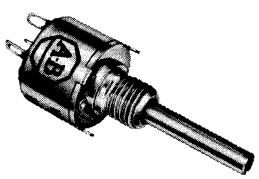
Type G (RV6) – Hot-molded composition, 100 ohms to 5 megs, ±10% and ±20%, 0.5W at 70° C, single section available with or without SPST switch.



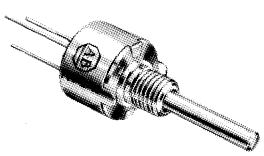
Type 2000 – Designed cost-effective in conductive plastic. 250 ohms to 1 meg, ±20%, 0.5W at 70° C single section. Three terminal options. Sealed for board washing. Non-metallic case and shaft. Choice of bushing.



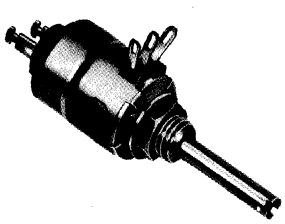
Type W (RV6) – Hot-molded composition, 100 ohms to 5 megs, ±10% and ±20%, 0.5W at 70° C, single section.



Type WP – Pin-terminal version of Type W. Suited for printed circuit board mounting.



Type WR – Radial-lead version of Type W. Available with or without switch. Switch versions offer contacts that close at start of clockwise rotation (TYPE WRS) or with switch with contacts that close at start of counter-clockwise rotation (TYPE WRH).



Standard options for most types include linear and non-linear tapers, a variety of shafts, bushings, shaft endings, shaft lengths, and hardware.

Types J and the multi-section MOD POT® with composition tracks are well suited for attenuator applications.

Type SP – Cermet, 50 ohms to 1 meg, ±10%, 1.0W at 70° C, single section. Only 3/8 inch diameter.

PRECISION CO-MOLDED CONDUCTIVE PLASTIC POTENTIOMETERS & ASSEMBLIES

JDKontrols, Inc.

WHEN POTENTIOMETER PERFORMANCE IS *CRITICAL*

2630 Lavery Court
Newbury Park, California 91320-1593

The JDK Co-Molded Conductive Plastic Process

JDK manufactures one type of potentiometer element — co-molded conductive plastic — because, to the designer and builder of systems in critical applications, there is no justification to use less than the best. In the JDK process, the termination and resistance materials are simultaneously molded with the plastic substrate. The result is a flush circuit with a very hard, smooth surface which, when combined with JDK's multifinger precious metal contacts, promotes ultra-long life, as well as excellent electrical performance in all environments. The superiority of the JDK flush circuit over the raised circuit elements (i.e., conductive plastic film, screened conductive plastic, cermet, hybrid, and wirewound) is most evident in its long-term consistent performance and reliability.

Potentiometers

Rotary and Linear Motion Transducers

WIREWOUND These precision potentiometers were developed for military use over a period of 27 years. They are widely used in instrumentation and automation where precise electrical and mechanical requirements are specified. Low resistance tolerance and TCR; close electrical angle tolerance. Custom designs are available.

CONDUCTIVE PLASTIC Our raised molded track will withstand 200,000,000 cycles of high dynamic velocities (10″ per second). The infinite resolution and low noise make these units particularly suitable for servo feedback applications. 100 g shock, 100—20,000 Hz at 50 g. Impervious to most gases and oils.

HEAVY DUTY LINEAR MOTION POTENTIOMETERS WIREWOUND AND CONDUCTIVE PLASTIC HDL

WIREWOUND M2028 This transducer combines the inherent accuracy and reliability of a wirewound potentiometer with the physical ruggedness required in industrial applications. They are used with hydraulic and mechanical actuators to measure and control linear motion. The self-aligning spherical ball ends and MS connector simplifies installation. High duty bearings give the ¼ inch shaft stability in the extended position.

CONDUCTIVE PLASTIC P1991 Where severe environmental conditions exist as in mills, factories and power generating plants, this linear motion transducer is practically indestructible. The unit is impervious to dust, oil and moisture. The molded, raised conductive track and graphite composition contacts provide for years of maintenance free service. As with the M2028, the self-aligning spherical ball ends and MS connector allows for ease in installation.

LIGHT DUTY LINEAR MOTION POTENTIOMETERS WIREWOUND AND CONDUCTIVE PLASTIC

LDL

WIREWOUND (M-Series) These miniature transducers combine the best electrical characteristics in the smallest size at the lowest cost. The units were designed for use in laboratory test equipment, light industrial applications and automation where great accuracy of electrical output is essential. The spherical ball ends add flexibility to mounting. These wirewound, linear motion potentiometers will meet the requirement in the majority of applications.

CONDUCTIVE PLASTIC (P-Series) Where long life in a hostile environment is required, these linear motion transducers with molded, raised tracks and graphite composition contacts have no equal. They are practically impervious to dust, water and oil. The high contact pressure resists the effects of severe vibration and shock. The units are being used in factories and mills where maintenance-free operation is essential.

PRECISION CONDUCTIVE-PLASTIC SINGLE TURN POTENTIOMETERS

PST

These conductive plastic potentiometers have been specially designed for severe environmental conditions in mill-factory operations as well as in critical military applications. The molded, raised track maintains itself free from contamination of foreign particles, oil or water. The high gram pressure of the graphite composition contact on the raised track gives excellent resistance to contact bounce under punishing vibration or shock, as well as an exceptional rotational life. Such units are particularly suited for applications where trouble-free maintenance is required.

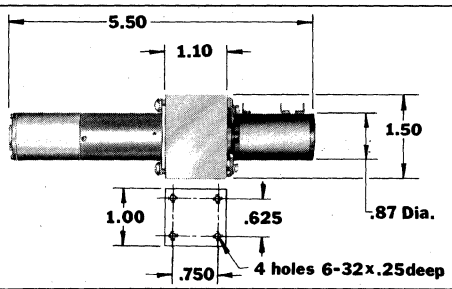
MAUREY INSTRUMENT CORP. MOTORIZED POTENTIOMETERS AND SWITCHES

MPS

General Description & Applications

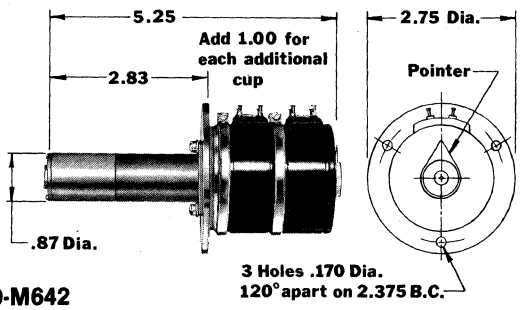
A family of single turn and multiturn, motor driven potentiometers and switches has been developed for industrial servo applications. They are used for such applications as variable speed controls on power generating sets, electrical-mechanical remote control, and readouts. They provide excellent accuracy at an economical price. These integrated motor-potentiometers are the result of years of Maurey experience in the manufacture of precision potentiometers and motor assemblies. The potentiometers, gear head, clutch, and motor are precisely matched to perform to exacting specifications. Motor-clutch-pot units are available in a wide range of specifications. A motor of selected speed and voltage may be matched with single, 3, 5, or 10 turn potentiometers, either wirewound or conductive plastic. When multiple voltages are required, single cups may be conveniently ganged with or without clutches. In addition, Maurey engineers can provide multi-tap potentiometers, special shafts and mountings, and a wide range of AC or DC motors to your specification.



87-H477

87-H477 DC Motorized Multiturn Potentiometer

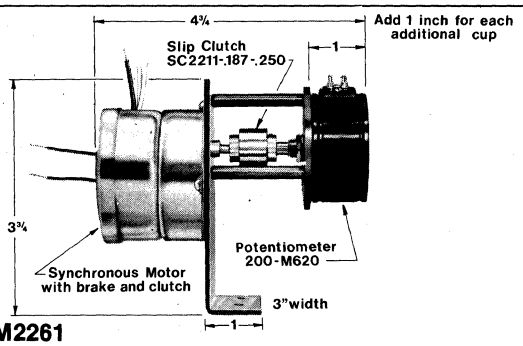
A compact, motor driven, 10 turn ⅞" diameter precision potentiometer. A slip clutch between the motor and the potentiometer protects the stops at the end of mechanical travel. The precision machined, square aluminum housing provides mounting holes for the device.
Sealed from dust and normal industrial environment.
Potentiometer independent linearity: ±0.25% or better
Power rating: 2.5 watts at 60°C
Resistances available: 500Ω, 1K, 2K, 5K, 10K, 20K, 50K, 100K.



200-M642

200-M642 DC Motorized Single Turn Potentiometer

A versatile motor, switch, potentiometer assembly. This model may use multi-pole, single throw switch cups, and with up to six precision potentiometers of various resistance values. All components are easily assembled or changed. Proven design for factory or mill environments. A pointer indicates position of wiper or percentage of voltage. A mounting flange simplifies installation on a panel or bracket.
Potentiometers have 320°electrical angle, linearity: ±0.5%
Power: 5 watts at 85°C.
Resistances available: 100Ω, 250Ω, 500Ω, 1K, 2K, 2.5K, 5K, 10K, 20K, 25K, 50K, 100K.



M2261

TYPE DP

DANCER WITH CONDUCTIVE PLASTIC POTENTIOMETER

The Type DP Dancer Potentiometer sensor is used to monitor the slack or tension on a moving sheet of material such as plastic, steel, rubber, etc. The construction is trouble free with almost unlimited life.

The precision potentiometer actuated by the shaft is designed with the unique Maurey raised molded track. In addition to the life of 200,000,000 ditters or oscillations of the wiper on the resistance track, the unit is impervious to moisture, oil, dust and corrosive gases.

The ground and polished stainless steel shaft is supported by stainless steel ball bearings in a one piece cast aluminum, explosion proof type housing. The electrical travel is adjustable by the two internal snap action switches.

To facilitate wiring, the housing has a 1/2 inch tapped hole and internal barrier type terminal block.

TYPE SAJ

SINGLE AXIS JOYSTICK CONTROLS WITH POTENTIOMETER

The Type SAJ single axis joystick control is the ideal choice for those industrial applications where a single plane of travel is to be controlled. Such devices are used to control the speed of a single motor, or to determine the back and forth motion of a hydraulic or pneumatic cylinder.

Both units are spring return to center for zero reference. They are available with either lever type or rotary actuator and will adapt to almost any mounting configuration. The bushing type potentiometer facilitates installation.

The precision conductive plastic potentiometer uses the unique Maurey raised molded track, resulting in almost unlimited life. In addition, this design insures that the potentiometer is impervious to moisture, oil, dust and industrial gases.

Vitreous Enameled Rheostats (Potentiometers)

OHMITE®

Now, Ohmite offers TWELVE sizes in its line of famous rheostats.

In all Ohmite rheostats, the resistance wire is wound on a solid ceramic core. The turns are locked in place with tough, protective vitreous enamel or Ohmicone® silicone ceramic. Pivoted, universal action mounting of the brush, assures perfect contact. Metal-graphite contact brushes, varied to fit current and resistance, insure good contact with negligible wear of the wire. Terminals at each end of the winding permit connection of the unit as a potentiometer.

NOW, FOR IT'S RATING, INDUSTRY'S SMALLEST RHEOSTAT!

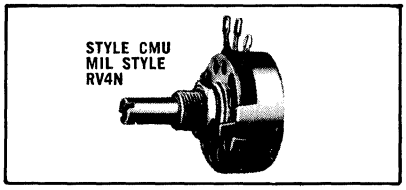
Molded Composition Potentiometers

OHMITE®



Ohmite molded composition potentiometers (Type AB) provide high quality and dependable performance.

Because the resistance element is a thick, solid-molded ring, longer life and smoother operation are obtained. This is due also to the molded composition contact. Units are dust and splash proof, fungus and corrosion resistant and meet the requirements of military specification MIL-R-94.

Type AB is rated 2 watts at 70°C ambient.

TYPE AB IS AVAILABLE WITH:

7/8" slotted shaft (CMU)

2" unslotted shaft (CU, CA, CB, CCU) and in a slotted shaft with locking type bushing (CLU)

TYPE AS AVAILABLE WITH:

- Locking type bushing and slotted shaft (Style AS)
- Standard bushing with longer, slotted shaft (Style ASM)

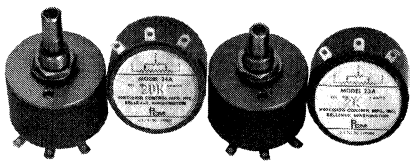
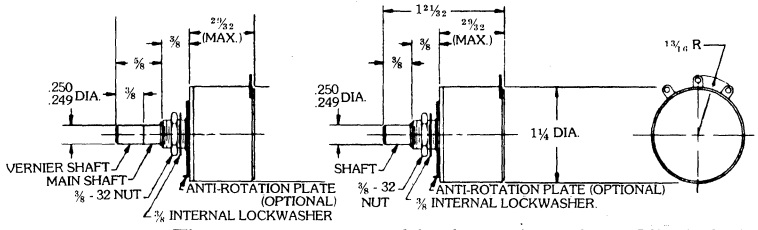
HIGH RESOLUTION VERNIER POTENTIOMETERS





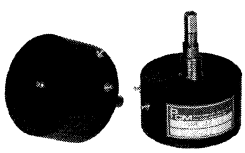
The model 23A and 24A high resolution vernier wirewound potentiometers incorporate both coarse and fine elements coupled mechanically and electrically in a single case. Any 5% portion of the coarse element is expanded over the 270° of shaft rotation on the vernier element giving a total rotation of 555° and a resolution roughly the same as the 3600° of rotation on a 10 turn potentiometer. The model 23A is controlled via a single knob rotated past the desired point on the course winding and backed up on the vernier to interpolate the desired setting. The model 24A can be controlled either with a single knob as with the 23A or with individually mounted knobs on the coarse and vernier shafts.

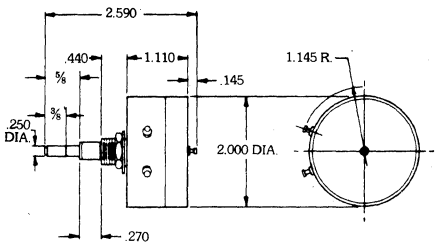
The main case is of high quality glass filled diallylphthalate thermo plastic which coupled with integral bushing/front mounting plate greatly adds to the mechanical and thermal stability. Premium resistance alloys are used throughout and precious metals selected for wear and compatibility are used for all contacts.

Three watt ±3% tolerance is standard; however, special tolerances to ±0.5% are available. Standard and special values from 100 ohms to 100K ohms are available.

Consult factory for your requirements.

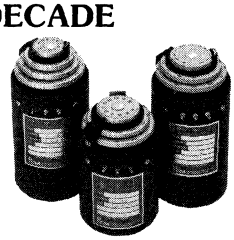
DOUBLE VERNIER POTENTIOMETERS

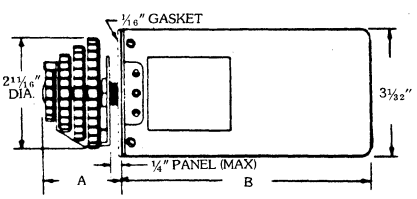




For applications requiring extremely high resolution, the Model 30A Vernier Potentiometer provides 0.002% or better resolution in less than 2½ turns of the shaft. The 30A does not rely on gear ratios to achieve mechanical resolution, but through a unique patented design, provides true electrical resolution which is roughly equivalent to 40 turn potentiometers. The vernier contacts span any 5% of the main winding and expand it over the 280° rotation of the first vernier. Any 5% segment of the first vernier is in turn expanded over the 270° rotation of the second vernier. Thus extreme resolution is possible in only 830° of total shaft rotation.

HIGH ACCURACY DECADE POTENTIOMETERS AND RHEOSTATS





Precision Control Mfg., Inc. (PCM) produces high quality, coaxial dial decade potentiometers and rheostats for high accuracy applications. The basic design features a positive in-line readout and easy, rapid adjustment made possible by a combination of distinct dials and a parallax free indicator. The unique electrical and mechanical design of PCM decades makes a small and accurate package which is very rugged.

Decade potentiometers provide linearities ranging from ±0.005% in the model 50A to ±0.0025% in the model 60A. All PCM rheostats have an accuracy base of ±0.025%.

All PCM decades are available in militarized versions which meet or exceed the environmental portions of MIL-E-5272C, Sections 4.2.2, 4.3.1, 4.4, 4.6 through 4.11.2, 4.12, 4.15 and MIL-T-945A, Sections 4.4.1 through 4.6. Resistors used in PCM decades are wound with only premium resistance alloys for low temperature coefficients and are single layer wound, with low inductance making possible precision attenuation over a wide range of frequencies. Switch decks utilize low leakage materials and feature gold plated silver contacts. The case is heavy gauge aluminum to provide shielding and dust protection, shafts are of stainless steel.

PREH POTENTIOMETERS

PREOSTAT 12 63100-000
PREOSTAT 12 MONO "P"

Both, the "Mono" and the "Duplo" versions of the Preostat 12 potentiometer provide an adjustability which is independent of manufacturing or fixture tolerances, that is virtually free of back lash.

This is accomplished by using Preh's proprietory process when combining the die cast shaft with the plastic rotor part.

In case of "Tandem" potentiometers, tracking of great accuracy is assured by using a "Janus" fashioned rotor, which is slipped onto the die cast zinc shaft.

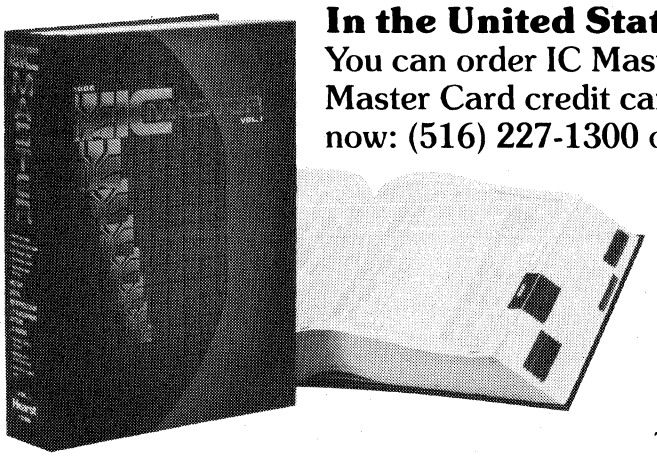
IC MASTER BELONGS ON YOUR BOOKSHELF

If you don't have your own IC MASTER, you can obtain your own copy by ordering now. Write for your own copy or order by telephone as described below.

IC MASTER is a two-volume set of technical data carefully organized to direct the engineer to the integrated circuits and related products that are closest to his specific needs. It is the surest and fastest way to find the optimum devices to answer an engineering design requirement. By ordering now, you won't have to borrow or search for IC MASTER the next time you need it.

Typical Use of IC MASTER
Can an engineer find out who makes a 256K dynamic RAM with an access time of 120 nanoseconds or faster in less than 30 seconds? He can if he turns to the Memory section of IC MASTER and looks for the 256K organization (words and bits per word) that he needs. Because each device is listed in order of access time, he can easily determine the devices that satisfy his speed requirements.



In the United States only:
You can order IC Master simply by charging it to your VISA or Master Card credit card. To place your order (USA only) call now: (516) 227-1300 or (408) 249-6800.

GET ORGANIZED!

Are your catalog files organized? Can you find any given catalog in a matter of seconds? If your answer is "Yes," you probably already have the EEM File System. But, if you said "No," you really ought to look into this simple system. It will save hours of time and tons of aggravation.

The EEM File System was invented over twenty-five years ago to help people who specify, buy, or work with electronic products and equipment. It is upgraded on a constant basis to reflect the current state of the art. It's easy to use and easy to customize to your particular needs.

You say you want to file catalogs by type of product? That's easy to do with The System. But, what are you going to do when there are multiple products in one catalog? Take Mallory for example. There are all kinds of products in the Mallory Short Form Catalog. With the EEM File System all you do is file the catalog under "M" for Mallory and refer to it on all of the cross reference cards that apply.

There are thousands of EEM File Systems in everyday use in engineering and procurement offices all over the world. Shouldn't you be using this proven system?

The EEM File System is shipped in one neat package. The package contains everything you need to set up your very own filing system. Best of all, it's easy to get and very affordable. Send a check or money order for $25.00 and EEM will pay the postage and sales tax. If you must use a purchase order, please add $5.00 for postage and handling. An invoice will accompany your System.

Don't waste any more time. Get organized now!

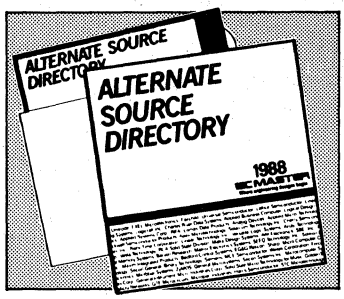
HEARST ENGINEERING SOFTWARE

ICMASD...IC Alternate Source Directory

If you've used the IC MASTER, you know what the Alternate Source Directory is. Engineers tell us that it's one of the most valuable sections of the Master. The Alternate Source Directory...ASD...is now available in floppy disk form.



The electronic ASD is FAST! Just ask a question and the answer pops up in a split second.

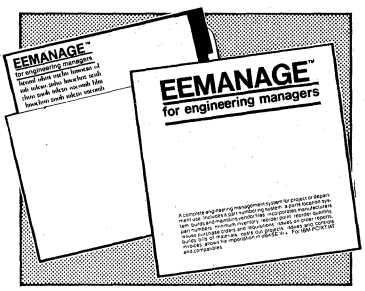
The electronic ASD is FLEXIBLE! You can add ICs and you can add comments.

You can add part numbers, prices, technical notes or anything else you like. You can customize the ASD to fit your needs and the needs of your company.

Order the 1988 Alternate Source Directory for your AT, XT or compatible. We'll send you two floppies and a very simple piece of printed documentation. Download the floppies and you're in business. All you need is a hard disk.

EEMANGE...for engineering managers

Developed by the publishers of EEM/ Electronic Engineers Master, EEMANAGE is a software program designed to make life easier for engineers and engineering managers.



EEMANAGE does many things: 1. Develops Bills of Materials 2. Assigns Part Numbers logically 3. Manages Engineering Inventories 4. Issues Purchase Requisitions 5. Relieves Engineering Inventories 6. Manages a Parts Storage System 7. Issues Engineering Change Notices 8. Interfaces with dBaseIII+ Programs.

EEMANAGE is completely menu driven. It is simple to understand and operate. Any competent secretary can be up and running on EEMANAGE in minutes.

Order EEMANAGE for your AT, XT or compatible. We'll send you one floppy and brief, very user friendly documentation.

The basic price for ICMASD or EEMANAGE is $149.50 each and includes floppy disk(s) and complete program documentation.

For immediate shipment you can order ICMASD or EEMANAGE on your VISA or MasterCard credit card simply by calling Marie Botta at (516) 227-1300.

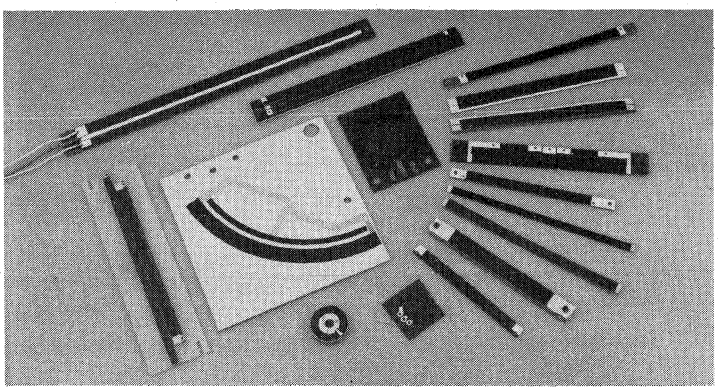
POSITION FEEDBACK

Repeatable to .0005″
Design it in—your way!

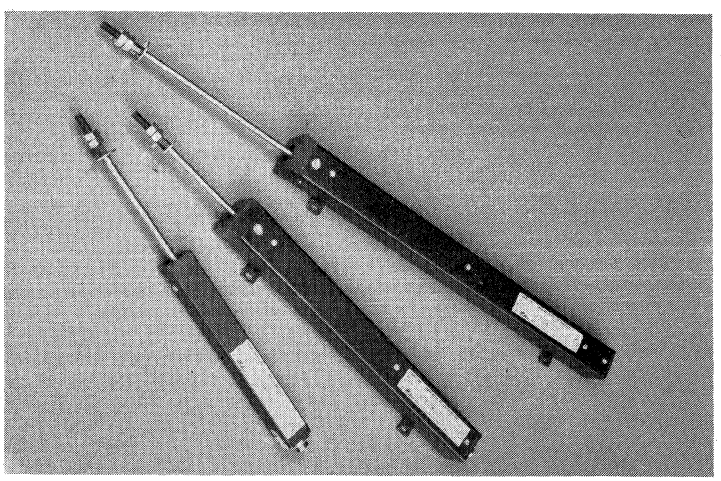


Waters built in servo-feedback elements simplify design and cut costs.

Why box yourself in with "packaged pots"—and linear-to-rotary conversions, and linkages, and costly housings, shafts and bearings you don't really need? Design position or motion feedback *your* way—with our long-lasting, low-noise, custom-made feedback elements.

We can supply squares, circles, strips—any geometric shape you need in linear and non-linear plastic elements. You'll save time. Cut costs. And chances are you'll improve performance. Send today for full information. Or call (508) 358-2777.

LONGFELLOW® POSITION TRANSDUCERS



If you make or use automated machinery, machine tools, molding presses or other equipment that requires reliable, long-lasting and highly accurate linear position signaling, Waters' Longfellow series of Linear Motion Transducers is the only answer.

Controller-compatible, the Longfellow series provides accurate position sensing, position feedback or programmable setpoint control with repeatability to .0005″. With built-in features like MystR® conductive plastic elements and collectors, precious metal wipers, aluminum housing and stainless steel shafts, these transducers can provide up to 100 million operations.

For the long (70″) and the short (1″) of it: Longfellow Transducers are the buy of the times.

ALL NEW with this edition of EEM

GET ORGANIZED!

Are your catalog files organized? Can you find any given catalog in a matter of seconds? If your answer is "Yes," you probably already have the EEM File System. But, if you said "No," you really ought to look into this simple system. It will save hours of time and tons of aggravation.

The EEM File System was invented over twenty-five years ago to help people who specify, buy, or work with electronic products and equipment. It is upgraded on a constant basis to reflect the current state of the art. It's easy to use and easy to customize to your particular needs.

You say you want to file catalogs by type of product? That's easy to do with The System. But, what are you going to do when there are multiple products in one catalog? Take Mallory for example. There are all kinds of products in the Mallory Short Form Catalog. With the EEM File System all you do is file the catalog under "M" for Mallory and refer to it on all of the cross reference cards that apply.

There are thousands of EEM File Systems in everyday use in engineering and procurement offices all over the world. Shouldn't you be using this proven system?

The EEM File System is shipped in one neat package. The package contains everything you need to set up your very own filing system. Best of all, it's easy to get and very affordable. Send a check or money order for $25.00 and EEM will pay the postage and sales tax. If you must use a purchase order, please add $5.00 for postage and handling. An invoice will accompany your System.

Don't waste any more time. Get organized now!

Let PowerTech expertise take the worry out of designing high-power!

High-Power Transistors For Many Applications

PowerTech's four families of high-power devices are typically used in *linear regulators, linear amplifiers, switching inverters, and motor control circuits.*

POWER TRANSISTORS

PowerTech offers single- and triple-diffused transistors, rated from 20 to 500 Amperes, 60 to 850 Volts, with power dissipation of 350 Watts or more.

POWERSWITCHER®

PowerTech's logic-driven, high-power switching circuits with integral driver and isolation circuitry can form the entire power stage of a switching inverter or switching motor controller. *Available at various voltages and current ratings, PowerSwitcher® can drastically reduce the time spent on designing, integrating and testing power systems.*

POWER DARLINGTONS

PowerTech's multiple-discrete Darlington technology permits easy customization and flexible design. We offer single- and triple-diffused Darlington circuits, rated from 150 to 3000 Amps (and higher), 60 to 850 Volts, with extremely high power dissipation.

POWERLINEAR®

PowerTech's high-gain power transistor circuits include driver circuitry, commutating diodes, and/or snubber circuitry. They're available either as individual circuits, or as multiple circuits in a single package (e.g., half-bridge or full-bridge circuits, etc.)

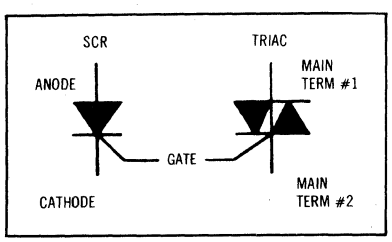
MINIGLOSSARY THYRISTORS/ HIGH POWER DIODES

THYRISTORS

A thyristor is a four-layer semiconductor (pnpn) that can be switched from an OFF to an ON state. This is usually done by a voltage or current pulse to the gate terminal. The device will then continue to conduct so long as the principal current of the device flows through the thyristor's two main terminals.

In many respects a thyristor is analogous to an electromechanical latching relay. In fact, thyristors have largely replaced these relays in newer equipment designs. But, misapplications and/or failure to fully understand the parameters of these and other solid state devices often leads to catastrophic field failures.

The terminology shown on this page has been condensed from common industry data books and is intended to be a guide for the engineer.



di/dt: *Critical rate of rise of ON state current* is the user's maximum design limit (Fig. 1).

di_R/dt: *Rate of decay of ON state current* (Fig. 1 & 2).

dv/dt (critical): *Rate of rise of OFF state voltage*. Lowest voltage rate of rise to cause a thyristor to turn ON.

dv/dt (reapplied) : *Rate of rise of reapplied OFF state voltage.*

I_{FSM}: *Nonrepetitive ON state surge current in diodes.* Maximum peak value of ½ cycles (60 Hz) a diode can withstand up to 100 times in its lifetime.

I_{TSM}: *Nonrepetitive ON state surge current in thyristors*. Maximum peak value of 60 Hz cycles a thyristor can withstand up to 100 times in its lifetime.

I_{DRM}/I_{RRM}: *Maximum peak forward/ reverse leakage current* at specified temperature and repetitive conditions.

I_{GDM}: *Continuous gate current not to trigger*. Highest dc gate current that will *not* cause thyristor to switch from OFF to ON at a specific temperature.

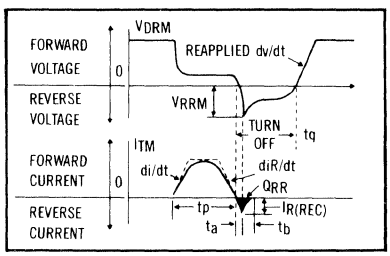


Fig. 1. Concurrent voltage and current waveforms

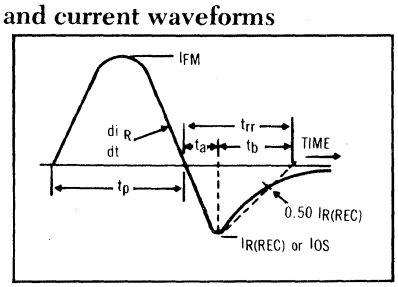

Fig. 2. Recovery current waveform

I_{GT}: *Continuous gate trigger current.* Absolute minimum gate current required to switch thyristor from OFF to ON.

I_H: *Holding Current*. Minimum current required to hold thyristor ON.

I_L: *Latching current*. Minimum current required to hold thyristor ON after removal of gate drive.

$I_{(REC)}$; *Recovery current*. Peak value of reverse current during recovery or turn OFF (Fig. 1 & 2).

I_{OS}: *Overshoot current*. See $I_{R(REC)}$.

I^2t: Maximum ON state, short time thermal capacity of the silicon element for operations less than ½ cycle of 180° conduction angle.

$I_{T(AV)}$: *Average ON state current* (max.)

Q_{RR}: *Reverse recovered charge* (Fig. 1).

$R_{\theta JC}$: *Junction-to-case thermal resistance* in degrees C per watt.

$T_{C(MAX)}$: *Max. allowable case temperature.*

$T_{J(MAX)}$: *Maximum allowable junction temp.*

t_d: *Delay time*. Interval between a specified point at beginning of gate pulse and the instant at which the principal voltage drops to a specified value. (OFF-ON) (Fig. 3)

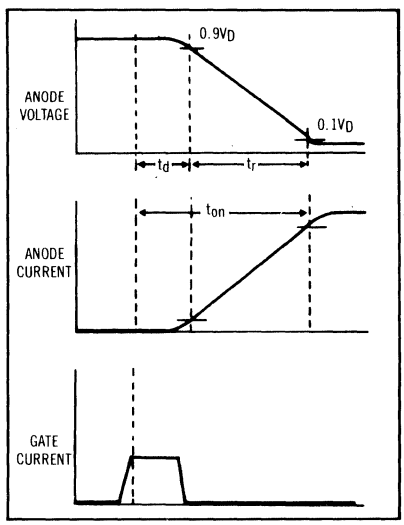

Fig. 3. Turn-on time waveforms

t_{on}: *Turn-on time*. The sum of delay time and rise time. (OFF-ON) (Fig. 3)

t_q: *Turn-off time.* Time between principal current reaching zero and the instant thyristor can block forward voltage without turning ON. (Fig. 1)

t_r: *Rise time*. Time between principal voltage dropping from one value to a second lower value when thyristor turns from OFF to ON. (Fig. 3)

t_{rr}: *Reverse recovery time*. (Fig. 2)

V_{DRM}/V_{RRM}: *Maximum repetitive peak OFF state/reverse voltage* excluding non-repetitive transients.

V_{DSM}/V_{RSM}: *Maximum nonrepetitive peak OFF state/reverse voltage*.

V_{FM}/V_{TM}: *Maximum forward voltage drop* at a specific forward current and case temp.

V_{GDM}: *Gate nontrigger voltage*. Highest dc voltage that will *not* cause thyristor to switch from OFF to ON.

V_{LATCH}: *Latching voltage*. Voltage required for thyristor to latch ON at a given gate current and junction temp.

$V_{TM(DYN)}$: *Dynamic ON state voltage*. Transient ON state voltage of thyristor when triggered into conduction for a given load and time.

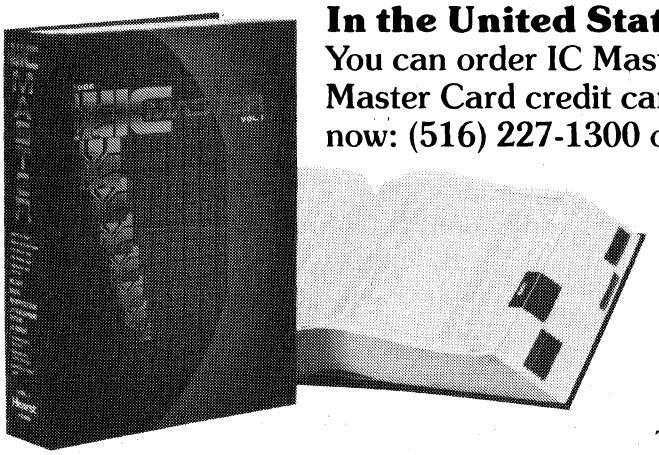
IC MASTER BELONGS ON YOUR BOOKSHELF

If you don't have your own IC MASTER, you can obtain your own copy by ordering now. Write for your own copy or order by telephone as described below.

IC MASTER is a two-volume set of technical data carefully organized to direct the engineer to the integrated circuits and related products that are closest to his specific needs. It is the surest and fastest way to find the optimum devices to answer an engineering design requirement. By ordering now, you won't have to borrow or search for IC MASTER the next time you need it.

Typical Use of IC MASTER
Can an engineer find out who makes a 256K dynamic RAM with an access time of 120 nanoseconds or faster in less than 30 seconds? He can if he turns to the Memory section of IC MASTER and looks for the 256K organization (words and bits per word) that he needs. Because each device is listed in order of access time, he can easily determine the devices that satisfy his speed requirements.



In the United States only:
You can order IC Master simply by charging it to your VISA or Master Card credit card. To place your order (USA only) call now: (516) 227-1300 or (408) 249-6800.

Or mail your order to

LARGEST SELECTION OF HEAVY DUTY 50/60Hz TOROIDAL POWER TRANSFORMERS

SOME ADVANTAGES OF TOROIDAL POWER TRANSFORMERS COMPARED TO LAMINATED TRANSFORMERS

- Lower mechancial hum
- Lower electrical noise
- Lower magnetic leakage
- Easier to electrostatically shield
- Lower weight
- Smaller dimensions
- Higher efficiency
- And most important price competitive vs. old fashioned laminated transformers

ALL NEW with this edition of EEM

GET ORGANIZED!

Are your catalog files organized? Can you find any given catalog in a matter of seconds? If your answer is "Yes," you probably already have the EEM File System. But, if you said "No," you really ought to look into this simple system. It will save hours of time and tons of aggravation.

The EEM File System was invented over twenty-five years ago to help people who specify, buy, or work with electronic products and equipment. It is upgraded on a constant basis to reflect the current state of the art. It's easy to use and easy to customize to your particular needs.

You say you want to file catalogs by type of product? That's easy to do with The System. But, what are you going to do when there are multiple products in one catalog? Take Mallory for example. There are all kinds of products in the Mallory Short Form Catalog. With the EEM File System all you do is file the catalog under "M" for Mallory and refer to it on all of the cross reference cards that apply.

There are thousands of EEM File Systems in everyday use in engineering and procurement offices all over the world. Shouldn't you be using this proven system?

The EEM File System is shipped in one neat package. The package contains everything you need to set up your very own filing system. Best of all, it's easy to get and very affordable. Send a check or money order for $25.00 and EEM will pay the postage and sales tax. If you must use a purchase order, please add $5.00 for postage and handling. An invoice will accompany your System.

Don't waste any more time. Get organized now!

FIVE SIZES:

EWC's Lo-Profile, plug-in power transformers are designed for low height, critical pc board applications in semiconductor control and instrumentation. Interchangeable with those of other manufacturers, the units are for use in single, dual or reference dc supplies or isolated control circuits. Sizes 2, 6 and 12 are available encapsulated in form-fitting shells to protect against possible damage due to water-soluble or other fluxes as well as electrolytic corrosion experienced on open-type constructions.

- **20VA TO 200VA • 115/230V @ 50/60Hz**
- **1.5KV RMS HIPOT • CLASS B (130°C)**

ADVANTAGES:

- Side-By-Side Bobbins (Secondary Wound alongside of Primary) Lower Interwinding Capacitance — eliminates the need for electro-static shield
- Hum-bucking (Semi-Toroidal) Construction [Lower Radiated Magnetic Fields, Balanced Wdgs., Larger Heat Radiating Surface and Lower Center of Gravity]
- High Power for Low Panel Heights and Narrow Card Spacing

MOUNTING: (4) Lamination Holes .20 Dia. Insulated hardware required.

RATINGS PER SECONDARY OUTPUT: VA-SEC = 0.5 x VA (Output) • V-SEC = V-SEC (Parallel) • I-SEC = I-SEC (Series)

NON-STANDARD RATINGS: Tapped primaries, secondaries different voltages, currents or frequencies can be furnished.

Units with higher VA ratings up to 1.25 KVA can also be supplied.

Triple Output Power Transformers

For triple-output regulated supplies

IDEAL FOR MICROPROCESSOR APPLICATIONS

These lines were designed around our standard PC, LP and CHASSIS-TRAN series transformers and are rated in terms of the final DC output after regulation by a 3-terminal IC regulator. 1500V Hipot is standard.

QUICK CONNECT POWER TRANSFORMERS

2500 Volt RMS Hipot in a variety of practical sizes. Maximum operating temperature 130°C available with either single 115 or dual 115/230V primary.

EWC's split bobbin and non-concentric winding provide better insulation and high signal isolation, thus eliminating the need for electrostatic shielding.

Adaptations of standard transformers are also available. Dots on schematics shown below indicate like polarity.

Power Transformers

INTERNATIONAL SERIES POWER TRANSFORMERS

Designed to meet UL, VDE, IEC, CSA.

The EWC series of International Transformers is designed and built to meet U.S. and international safety standards.

These transformers are available in both PC and chassis-mount construction. With power ratings of 2.5VA to 175VA, these transformers are built on dual-bobbins with insulating shrouds to provide 4000V RMS isolation between primary and secondary. The non-concentric construction reduces primary to secondary capacitance and eliminates the need for an electrostatic shield.

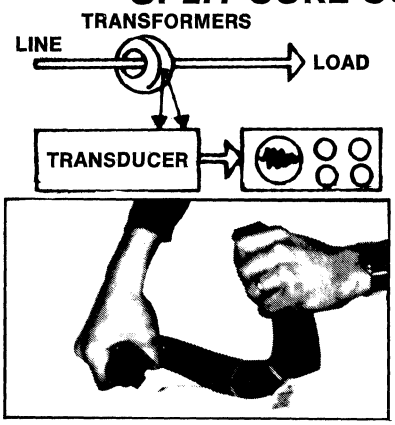
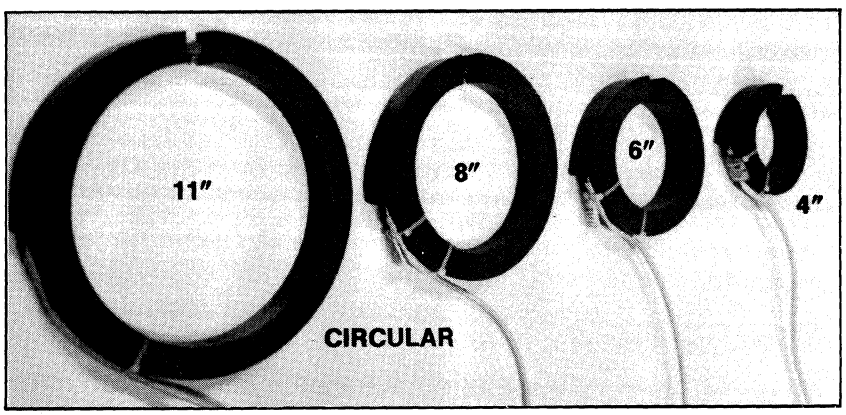
SPLIT CORE CURRENT (INSTRUMENT) TRANSFORMERS





Four models are available for round conductors plus one for buss bars. Use with any 5 Amp indicating or recording ammeter or with an Amp or Watt transducer. The flexible core is made of directional silicon steel. The secondary windings are copper wire. Encapsulation is silicon rubber to protect against moisture, dirt, oil and corona. Remains flexible from −45° to +200°C. Insulation level is 600 Vac and can be used over insulated conductors at higher voltages. Frequency: 50-60 Hz. Safety Factor: Secondary voltage is limited to less than 40 Vac when secondary leads are open. An electronic voltage clamp holds secondary voltage to less than 1 Volt when open circuit voltage exceeds 40 Vac. Transformer is red and secondary leads are yellow with spade connectors.

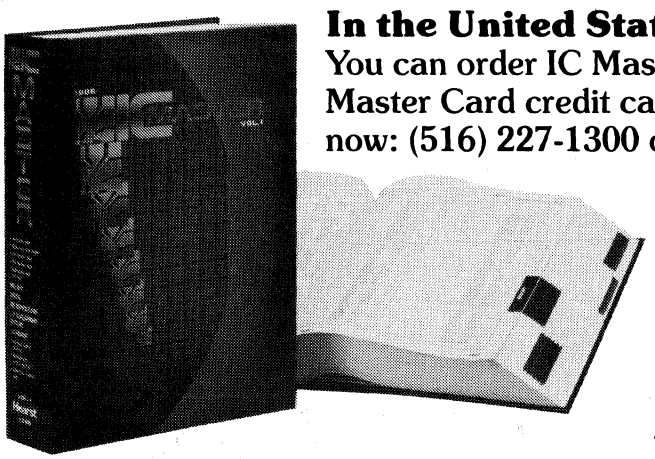
IC MASTER BELONGS ON YOUR BOOKSHELF

If you don't have your own IC MASTER, you can obtain your own copy by ordering now. Write for your own copy or order by telephone as described below.

IC MASTER is a two-volume set of technical data carefully organized to direct the engineer to the integrated circuits and related products that are closest to his specific needs. It is the surest and fastest way to find the optimum devices to answer an engineering design requirement. By ordering now, you won't have to borrow or search for IC MASTER the next time you need it.

Typical Use of IC MASTER
Can an engineer find out who makes a 256K dynamic RAM with an access time of 120 nanoseconds or faster in less than 30 seconds? He can if he turns to the Memory section of IC MASTER and looks for the 256K organization (words and bits per word) that he needs. Because each device is listed in order of access time, he can easily determine the devices that satisfy his speed requirements.



In the United States only:
You can order IC Master simply by charging it to your VISA or Master Card credit card. To place your order (USA only) call now: (516) 227-1300 or (408) 249-6800.

Foxboro Power Components Group

If your business is involved with the processing of oil...petroleum products... food...chemicals...paper...pharmaceuticals...energy...pure water...or almost anything else, you already know The Foxboro Company. Since 1908, processors have depended on Foxboro for ultra-reliable instruments and systems that can stand up to continuous use in the most demanding applications and process environments.

The Foxboro Power Components Group designs and produces transformers for use in Foxboro process control equipment. We can also provide other manufacturers of high-quality electronic equipment, like yourselves, with a full line of standard and custom transformers. Transformers that are engineered and built to tough Foxboro standards.

Why buy your transformers from us?

To make us the most modern transformer production facility in the country, The Foxboro Company has invested hundreds of thousands of dollars in the world's most sophisticated automated production and test equipment.

The automated equipment gives us the capability to produce even more transformers than The Foxboro Company's numerous manufacturing divisions require.

This situation creates an excellent opportunity for you to save money.

Foxboro/PCG can provide you with some of the best transformers you'll find anywhere. At prices that meet, or typically beat, what you're currently paying.

Foxboro has also made a serious commitment in the technical support, engineering, and design areas. As a result, no matter how extensive your needs, Foxboro/PCG can provide you with in-depth application assistance and custom design support.

Examples of Custom Designs

1. For a 1.4 W dc-to-dc converter, we designed a unit on an RM Core with 23.3 V input and a switching frequency of 80 kHz, dual full-wave center tap output to give a +12 V at 90 mA and -12 V at 25 mA, and pass a 2500 V surge withstand.

2. For a 30 V to 250 V 2 W dc-to-dc converter, we designed on an RM Core a unit with 29.1 V input and a switching frequency of 46.4 kHz. Auxiliary output is a 3.50 V full-wave center tap at 1.2 mA. Main output provides 252 V at 8 mA into a full-wave bridge and a capacitor input filter.

3. For a 15 W dc-to-dc converter, we designed on a small EE Core a unit with a primary circuit of 17.0 V push-pull and a switching frequency of 327 kHz. Two outputs provide 5.63 V at 2.0 A, full-wave center tap into an inductive filter, and 12.75 V at 0.4 A, full-wave center tap into an inductive filter.

4. For use in off-line rectified 125 kHz switching 150 W to 190 W power supplies, we designed a series of transformers and inductors on an EC Series ferrite core. Transformer and power MOSFET circuits are fed with line-derived 200 V dc mimimum to 375 V dc maximum bus. The single dc output supplies in the series were for 5 V 30 A, 12 V 6 A, 15 V 10 A, 24 V 8 A, and 28 V 6 A dc.

VARIABLE TRANSFORMER

DESIGN HISTORY

Variable Transformers have been built for over 50 years by many companies around the world. There are two basic designs of electromechanical variable tranformers, linear and toroidal. The linear variable transformer is constructed in a vertical, or linear manner while the toroidal is constructed on a ring core, or "donut." The toroidal variable tranformer is the most common device used.

They are both single layer windings on a laminated steel core. The turns on one face of the coil are exposed. A carbon brush traverses the coil face to provide for voltage adjustment. In order to provide continuous, noninterrupted output voltage, the carbon brush must contact the next turn before leaving the previous turn. This creates a shorted turn condition. When the two turns, at different voltages, are bridged, or shorted, a circulating current results. This current, flowing through the shorted wire loop and carbon brush, creates heat. This heat must be dissipated through the coil and brush holder. This inherent design flaw severely limits the capability of these devices. To build a toroidal variable transformer capable of commutating greater than their limit of 8 kVA of power, would require larger wire sizes and more brushes. Both of these changes would increase the short circuit current, thus rendering such a device impossible, without extravagant heat sinks, forced air, or oil cooling.

In order to use the devices for applications greater than 8 kVA single-phase or 29 kVA three-phase, it becomes necessary to multi-stack or "gang" many core/coil assemblies in a series/parallel configuration. This becomes not only cumbersome, but also less reliable due to the multiple brush and motor drive system required. Serviceability is also difficult with such a "mechanical monster."

Other variable voltage control devices designed for high power voltage control, above 100 kVA, have other design or operational flaws. These devices sacrifice efficiency, size and weight, waveform purity, power factor, and/or cost.

What the industry needed was a variable autotransformer, which is the most efficient variable voltage device, that is smaller, lighter, more reliable, easy to service and reasonably priced.

THE PESCHEL SOLUTION

Having tried every device available, Hipotronics sought to design the perfect voltage control device. What had to be done was to design a variable transformer that eliminated the shorted turn problem. The result of our efforts was the **PESCHEL VARIABLE TRANFORMER.**

Having eliminated the short circuited turn problem, through our patented diode switching technique, it is now possible to build a variable tranformer capable of commutating greater kVAs and voltages than ever before possible. Most PVTs are constructed on a standard single-phase or three-legged, three-phase core. With no series or paralleling of core/coil assemblies necessary (most models), the PVT is generally smaller, lighter, more efficient and more reliable than any other means of variable voltage control.

Construction in a linear fashion affords greater design flexibility; core size, wire size, winding length. This allows for the design and construction of almost any kVA or MVA and any voltage, **enabling the PVT to be used in applications previously impossible with other variable transformers.**

DESIGN

The Peschel Variable Transformer is a continuously adjustable autotransformer. It is constructed of copper coils wound on a linear, laminated steel core. One face of the coil is epoxy encapsulated, then sanded to expose the turns. The exposed coil turns, or taps, are then plated. Each coil is wound in such a fashion as to expose two separate tracks of turns; one track of all the odd turns, the other even. Each track is traversed by a sliding copper contact. The sliding contacts are thinner than the distance between adjacent turns of the same track, thus not shorting the turns. Between the contacts is a series of back-to-back diodes. Using the diodes solely for their forward voltage drop (FVD), the voltage required across the diode before it will conduct current, and maintaining transformer volts per turn less than the total FVD, essentially no current can circulate between the two contacts. As the contacts traverse the coil, the current flow to the load alternates between contacts, depending upon which turn of the transformer is being used, odd or even.

This patented method provides for continuous voltage control with no shorted turns.

Split Bobbin PC Board Transformers

The use of a Split Bobbin allows winding to be nonconcentric (side-by-side), consequently high isolation is achieved at low cost.

- Better insulation — 2500 VRMS hipot is standard.
- Lower capacitance — no need for electro-static shield.

Please note that the standard items listed below utilize 6 or 8 pins, while 12 pins are available. We would like to quote your more complex requirements . . . you may save cost and space by combining two less complex Transformers into one.

We would also be glad to quote your less complex requirements. For example, if only a Single Primary and Single Secondary are needed, you can save considerable cost by utilizing only 4 Pins.

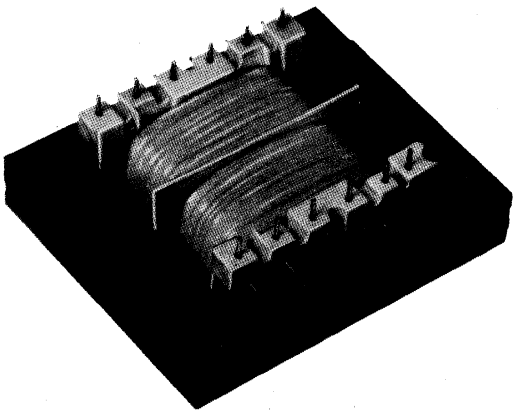
Low Profile Split Bobbin PC Board Transformers

- **Only 1.13″ high**

XL Series transformers offer a particularly low profile for 18VA, allowing for 1.25″ card spacing.



The use of a split bobbin allows winding to be non-concentric (side-by-side), consequently high isolation is achieved at low cost.

- Better Insulation — 2500 VRMS hipot is standard.
- Lower Capacitance — no need for electro-static shield.

If the standard items shown here do not fit your requirements, we would be glad to quote on your custom needs. Often this can save space and considerable cost.

ZERO DEFECTS IS THE STANDARD FOR OUR MAGNETIC PRODUCTS

At Magnetek we take pride in our reputation for quality military and commercial products. We have always been committed to manufacturing the very best magnetic products for our customers.

DEFECT PREVENTION VS TRADITIONAL DEFECT DETECTION

Automatic Data Acquisition (ADA) equipment in product testing has created a new philosophy about Quality Assurance in manufacturing. This computerized testing capability enables fast, extensive and economical data collection of product parameters.

Statistical Process Control (SPC) is now an inexpensive and practical reality. Our Quality Improvement Team representing engineering, quality assurance, manufacturing, material control and accounting evaluates the data through Histograms, X bar R Charts and Cause & Effect Diagrams.

Action items from this analysis then close the loop by:

- Tracking part-to-part variation within a process to determine consistency.
- Revealing trends and step changes before they lead to defects.
- Targeting processes to be measured.
- Reducing variation caused by Materials, Methods, Machines, Man, Measurements and Mother Nature (environment).

ADA + SPC + ACTION = ZERO DEFECTS

Although Zero Defects is a tall order, we at Magnetek are committed to it and have the tools for achieving it.

U.L. RECOGNIZED TOROIDAL CURRENT TRANSFORMERS

This series of five "C.T.'s" was developed for monitoring service entrance currents and circuit currents in residential and commercial buildings. They were designed originally for energy audit programs for the U.S. Department of Energy.

Since these devices are mounted in all conceivable locations, from old electrical systems to new construction, safety is paramount. The design was accomplished in close coordination with Underwriters Laboratories to assure a safe installation in the factory or the field, regarding prevention of shock hazard, fire prevention and physical ruggedness of the product for rough handling in extreme environments. Many states now require U.L. recognized devices for these installations.

As a result we have developed a product well suited to the task and with excellent performance characteristics. Linearity of the output signal to monitored current is within 2% from $^1/_{10}$ to full rated value.

Each unit is fully encapsulated in a molded case of Noryl. The primary of the C.T. is formed by passing the wire to be monitored through the center of the toroid, creating a single turn. The secondary is lead out to an 8 foot twisted pair of U.L. 1015 stranded PVC lead wires.

The "C.T.'s" are offered with (—001) and without (—002) a precision 1.00 ohm internal burden resistor across the secondary. With the resistor, the output is .333 volts ±2% at the rated input current.

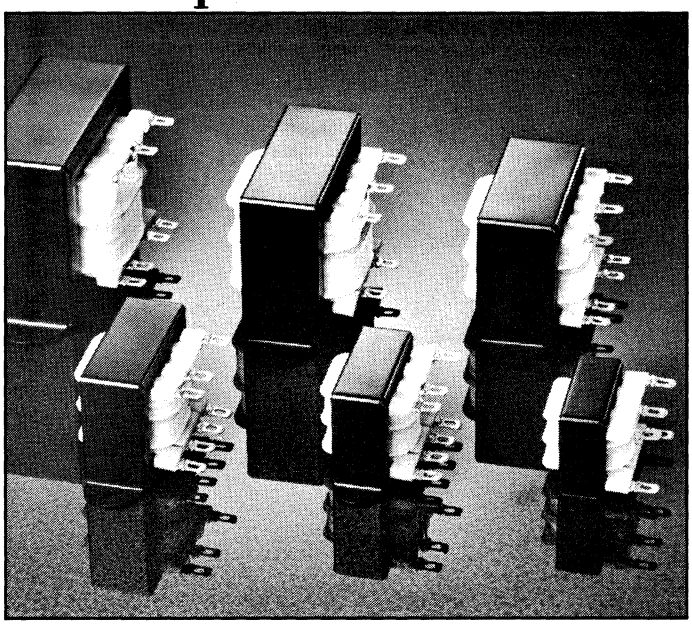
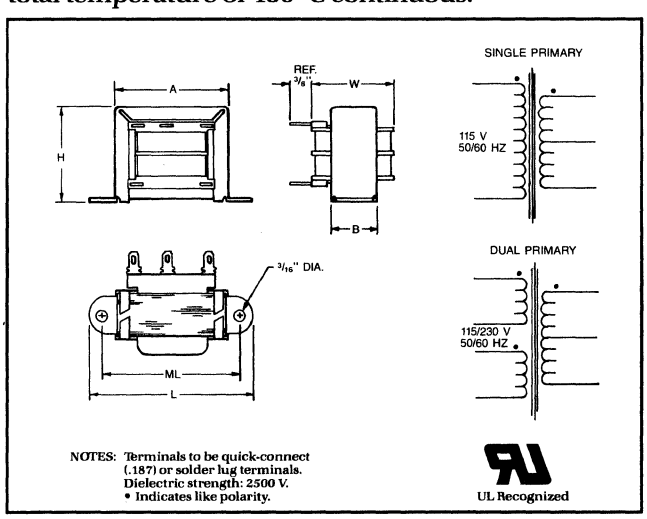
Quick Pack™
small power transformers



Quick Pack™ transformers offer a significant size and height reduction for a given VA rating and come with a quick-connect or solder terminal. Bobbin winding reduces transformer size and space. Split Bobbin non-concentric winding eliminates costly electrostatic shielding, making possible higher HiPot testing - 2500V. Class B insulation insures maximum total temperature of 130° C continuous.



NOTES: Terminals to be quick-connect (.187) or solder lug terminals.
Dielectric strength: 2500 V.

Split Bobbin Transformer

Triad's new Split Pack split bobbin transformer increases the depth and versatility of Triad's already extensive line of PC board mounted transformers. Like Triad's recent Flat Pack™ series, the Split Pack transformers are nonconcentrically wound—with primary and secondaries wound side by side, unlike the secondary-on-top-of-primary windings of standard PC board transformers. Split bobbin winding and low capacitive coupling eliminate costly electrostatic shielding. The Split Pack's unique construction make possible higher HiPot testing—2,500V rather than 1,500V. Dual primaries-115/230V, 50/400 Hz, plus precision spaced terminals.

* Windings may be connected in series to obtain their combined voltage when properly phased. Current will be equal to the current of the lowest winding. Example: Two 6.3V windings @ 2A in series would be 12.6V @ 2A. Windings may also be connected in parallel to obtain combined current. Example: Two 6.3V windings @ 2A in parallel would be 6.3V @ 4A. ¶ Tapped primary 105-115-125. ‡ 60 cycle operation.

PRECISION TOROIDAL TRANSFORMERS — SCOTT "T" — for Synchro to digital and digital to synchro conversion — standard and custom designs available.

Magnetico provides custom signal transformers with high accuracies over the full military temperature/environmental range. Our specialty is High Performance and Consistency in the smallest size. Your design or our design to your specifications.

These transformers are fully encapsulated P-C mount toroidal/laminated units. They are manufactured in accordance with Mil-T-27E Grades 4 and 5. They have high input impedance and low output impedance combined with high transformation accuracy and minimum quadrature. These characteristics make these units particularly useful in solid state synchro to digital and digital to synchro converter applications.

MCI Transformer Corporation GUARANTEES DELIVERY

TOLL FREE:
1-800-MCI-TRAN

- **Delivery of 1 to 5 stock transformers within 48 hours**
- **Delivery of 1,000 transformers in four weeks**

IF we don't keep these promises, we will pay the freight on the delivery. Many manufacturers promise prompt delivery but no one else is truly guaranteeing delivery in this manner.

Our modern U.S. manufacturing facilities enable us to service promptly both large and small users. We maintain an extensive inventory of all items so that we can ship small quantities immediately from stock. Since all of our products are manufactured at one location, we can quickly respond to volume requirements and are able to hold our costs to an absolute minimum and pass these savings along to you.

STANDARD STOCK LINE MCI maintains an extensive inventory of Horizontal, Vertical and Low Profile printed circuit board transformers and quick-connect Power Transformers which are recognized under Underwriters Laboratories File No. E86403 (M). MCI promises "Guaranteed Delivery" of 1 to 5 transformers within 48 hours and 1,000 transformers in four weeks.

ENGINEERING AND CUSTOMER SERVICE Many times only one source is listed on an engineering blueprint. The next time you have a requirement, let us assist you. Perhaps you will be able to use one of our stock transformers. If so, you will benefit by saving substantially and having the convenience of off-the-shelf delivery. If your requirements cannot be satisfied by using one of our standard stock units, MCI will assist you in designing the exact transformer you require and, as always, at a competitive price. Start saving today—put MCI on all your transformer prints.

NEW PRODUCTS MCI was founded in 1959. Our experience and technology have enabled us continually to introduce the most innovative designs to accommodate the changing needs of our customers. MCI's encapsulated transformers, series 4-11, 4-12 and 4-15 are perfect examples. These transformers were designed for low power requirements for high volume users. Production of this series is highly automated and MCI can favorably compete with any source in the world, eliminating the need to purchase transformers off-shore. We are pleased to announce that we are introducing a new line of V.D.E. transformers for world wide use.

VALUE ANALYSIS You can be confident when you order an MCI transformer, as only the highest quality materials are ever used in all MCI products. All our transformers are made with strict quality control and each unit is inspected and tested at the end of each manufacturing operation and then tested 100% for output voltages and exciting current in order to comply with our rigid standards.

All MCI products are manufactured in the U.S.A. at one location in the most modern automated manufacturing facilities available. There are no hidden transportation costs from additional manufacturing facilities and no extended delivery times. MCI's decision to have only one location was made with you in mind so that we can offer you the fastest possible response time and the lowest prices in the industry.

You will enjoy dealing directly with MCI without having to deal with sales representatives or distributors. This is another way in which MCI cuts costs and reflects the savings directly in lower costs to you.

MCI is dedicated to bringing our customers only the best quality and service at highly competitive prices.

MCI eventually...why not now?

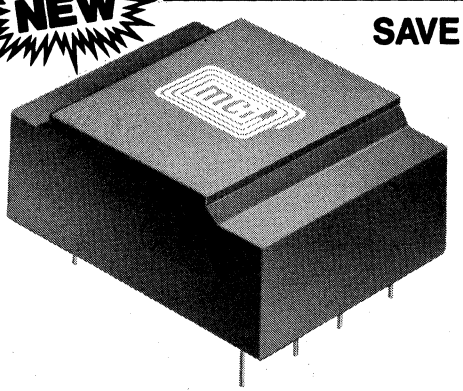
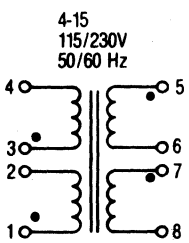
LOW PROFILE PC ENCAPSULATED TRANSFORMERS SERIES 4-15

NEW

SAVE UP TO 40% IN VOLUME





Our encapsulated design offers high reliability because of its mechanical strength, electrical insulation and moisture resistance. The internal construction consists of 2 split bobbins which isolates the primary and secondary thereby eliminating any need for an electrostatic shield. The construction will pass requirements of U.L., C.S.A. and V.D.E.

COMMON MODE INDUCTORS—TRANSFORMERS

MICROTRAN company, inc.

common mode suppression inductors

For Elimination of Line Transmitted EMI/RFI Interference from SMPS Equipment

- Compact PC construction.
- 3750V RMS hipot.
- VDE, IEC, UL, CSA compatible.
- 130°C insulation system.
- Cost effective design.

Common mode suppression inductors are used to minimize AC line-conducted interference produced by switching power supplies and regulators. Balun winding to within 1% produces opposing magnetic fluxes in the core to effectively cancel differential-mode noise signals appearing across the AC line. Use of common mode chokes substantially reduces component count as well as inductor size, as compared to differential filtering. Constructed with spacing between windings to meet international safety requirements.

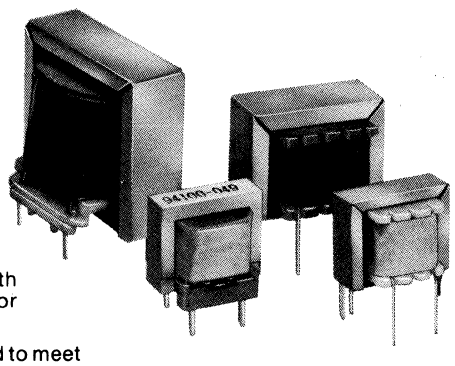
AUDIO/MATCHING TRANSFORMERS



MPI's miniature audio transformers are highly reliable and extraordinarily economical. All can be supplied vacuum epoxy impregnated with either standard leads or plug-in printed circuit construction. There are several standard bobbins with various pin spacings permitting optimum use of voice-grade telephone lines for broadband data signals.

Our newest line of extremely small telephone coupling transformers were designed to meet FCC Part 68 specifications for use with telephone equipment, modems and a variety of communications products.

They feature a frequency response of 300-3500 Hz ± 0.5dB; wide dynamic signal level of -45dBm to +7dBm; low distortion (0.5% max.); impedance matching of ± 10% over entire range; return loss of 16 dB min.

Depending on your requirements, any of several standard cores can be used in the construction of specific high quality designs.

Custom designs for your special requirements necessitating other ratings and construction can be met by our MPI design engineers.

WIDEBAND BALUN TRANSFORMERS

Baluns, consisting of one unbalanced primary and one DC-isolated, center-tapped, balanced secondary winding, transfer power bi-directionally and are matched in both directions.

North Hills' baluns are precision-engineered for low insertion and return losses. Bandwidths extend from low-frequency cut-off (LCO), where response is down no more than 3 dB with respect to that at mid-band, to high-frequency cut-off (HCO), where the VSWR does not exceed 1.25.
Mid-band insertion loss <0.5 dB.

APPLICATIONS

- Impedance matching between balanced and unbalanced circuits
- Measurement/test system load matching
- Computer Local Area Network cable impedance matching
- Antenna coupling
- DC isolation and common-mode noise rejection

FEATURES

- Extremely wide, flat frequency response
- Broadest selection of products available from stock
- 120 dB isolation at power frequencies
- Low VSWR (<1.25) and flat loss (<0.5 dB)

ISOLATION POWER TRANSFORMERS STEP-UP/STEP-DOWN VARIABLE VOLTAGE RATINGS

- The IPS Series features (4) identical windings; (2) primaries and (2) secondaries; each rated at 0/104/110/120 volts allowing for rating combinations of 104V, 110V, 120V, 208V, 214V, 220V, and 240V with primary and secondary isolated from each other. Step-down of 440V to 220V or step-up of 220V to 440V can be achieved by inter-connecting primaries and secondaries in an Auto-Transformer configuration. This eliminates isolation but a doubling of the power rating can be realized.
- The DIPS series is similar to the IPS series except the dual secondaries are each rated 0/208/220/240 volts.
- 50 Hz to 500 Hz operating frequency range.
- Electrostatically shielded with shield grounded to the core. This connection can be opened for floating shield.
- ¼ inch thick phenolic terminal boards with nickel plated brass hardware (#10-32 on 250 VA and 500 VA; ¼-20 on 1000 VA and 2000 VA). Voltage rating can be varied with easy to make interconnections.
- Completely varnish impregnated and ruggedly constructed with prime raw materials.
- Well insulated and designed to withstand 2500 VRMS hipot.
- 55°C temperature rise above ambient

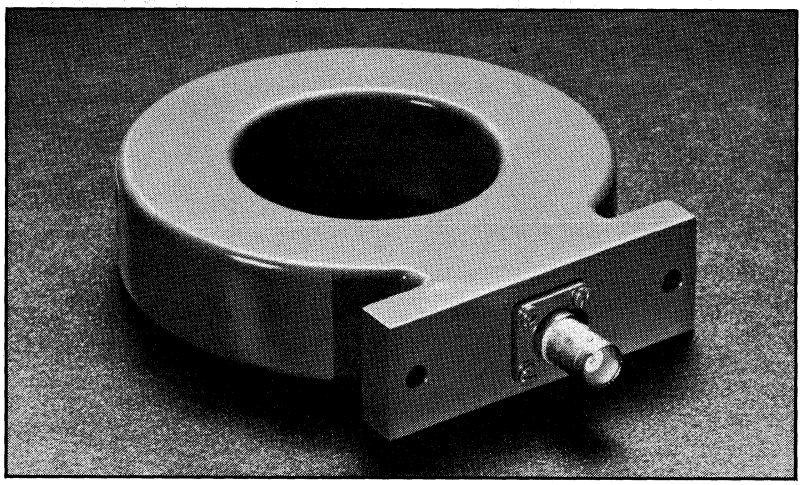
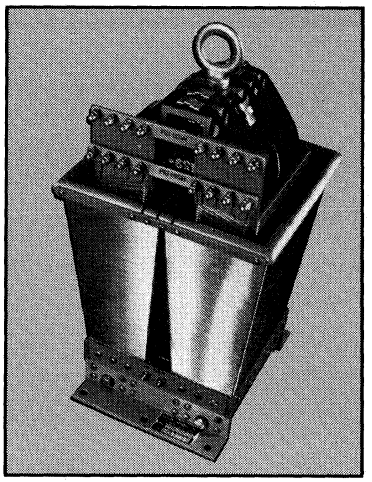
PEARSON ELECTRONICS, INC.





Wide Band, Precision Current Monitor Transformers

With a Pearson current monitor and an oscilloscope, you can measure pulse or ac currents from milliamperes to kiloamperes, in any conductor or beam of charged particles, at any voltage level up to a million volts, at frequencies up to 200 MHz or down to below 1 Hz.

The monitor is physically isolated from the circuit. It is a current transformer capable of highly precise measurement of pulse amplitude and waveshape. The one shown above, for example, offers pulse-amplitude accuracy of + 1%, − 0% (typical of all Pearson current monitors), 20 nanosecond rise time, and droop of only 0.8% per millisecond. Three db bandwidth is 1 Hz to 20 MHz. Whether you wish to measure current in a conductor, an electron device or a particle accelerator, it is likely that one of our off-the-shelf models (ranging from ¼" to 10¾" ID) will do the job. In addition to our standard models, we build many custom designed current transformers to meet special needs and applications.

Very High Voltage & Very High Current Pulse Transformers

Pearson Electronics specializes in the development, design and manufacture of high and super high voltage pulse transformers. Typical of the applications for which we have designed and manufactured pulse transformers are units for supplying beam power to high power microwave tubes such as klystrons and traveling wave tubes, units providing pulse voltage to particle accelerator injection systems, pulsed x-ray tubes and high power lasers.

The Electronic Products Department of the Perkin-Elmer Corporation is in a unique position to provide Custom Precision Signal Transformers as a result of 20 years of experience designing and manufacturing very special transformers for the Vernistat® a.c. potentiometer and allied products. **High Performance in small size has always been a successful objective.** Our State of The Art Winding Equipment and Techniques enable close control of turns and taps for close matching of windings and repeatibility of product.

Perkin-Elmer can provide Custom Signal Transformers with high accuracies over the full MIL temperature range. For example, exponential function units with 80 taps to an accuracy of ±0.003% can be provided. SCOTT T Transformers have been built to an accuracy of 5 seconds of arc with a null of 0.1 millivolt. The transformers are fully encapsulated toroidal units and are available with contact pins for PC board mounting. They are manufactured in accordance with MIL-T-27C Grade 5. High input impedance and low output impedance can be matched to specifications. Operating frequency can also be per specifications.

SCOTT T TRANSFORMERS

The SCOTT T input transformers converts 3 wire synchro inputs to 4 wire resolver outputs (sin θ and cos θ) with high transformation accuracy and minimum quadrature. SCOTT T Transformers for converting 4 wire resolver inputs to 3 wire synchro outputs can also be supplied. Our output SCOTT T Transformers maintain high accuracies even under heavy load conditions. These units are useful in solid state synchro to digital and digital to synchro converter applications and are particularly applicable in multiplexed conversion systems.

MINIATURIZED SWITCH MODE INVERTER TRANSFORMERS

50KHz-150KHz / 10 Watts-60 Watts

Engineers are increasing the frequency of operation in DC-DC Converters for higher power applications. The availability of power MOSFETS which do not exhibit some of the problems encountered with the bi-polar transistors help to ease the Designer's task. For this reason Pico has developed a series of standard 50KHz to 150KHz transformers for use in push-pull circuits.

For low power applications please consider our self saturating transformers shown on pages 20 and 21 which offer many advantages.

For your custom design applications please contact the Factory.

CCS-COPPER CLAD STEEL, TINNED 100% ELECTROPLATED PER MIL-T-10727A AND ASTM CCS B452.

- ***Large step-up ratios with flat frequency response over the entire audio range.***
- ***Gapless laminations provide wide bandwidth with extremely low distortion. Use of two magnetic shields made with extra thick mu-metal and gapless core provide negligible hum pick up. All units provided with electrostatic shield.***
- ***Your choice of two package styles, stud mounting with flying leads or low profile plug-in. Identical electrical performance regardless of package style.***
- ***Frequency response ±1 dB, 30 Hz – 15 kHz.***
- ***Low profile plug-in (24000 series) meets MIL-T-27D (TF5R21ZZ).***
- ***Because of gapless laminations, unbalanced DC current should be avoided.***
- ***Typical distortion of 1% at power level of 0 dBm (1 Milliwatt), 30 Hz – 15 kHz. If the low frequency is raised, the power level for 1% distortion is as follows:***

50 Hz - 3 Milliwatts (4.7 dBm)
100 Hz - 10 Milliwatts (10 dBm)
300 Hz - 150 Milliwatts (21.7 dBm)

ALL NEW with this edition of EEM

GET ORGANIZED!

Are your catalog files organized? Can you find any given catalog in a matter of seconds? If your answer is "Yes," you probably already have the EEM File System. But, if you said "No," you really ought to look into this simple system. It will save hours of time and tons of aggravation.

The EEM File System was invented over twenty-five years ago to help people who specify, buy, or work with electronic products and equipment. It is upgraded on a constant basis to reflect the current state of the art. It's easy to use and easy to customize to your particular needs.

You say you want to file catalogs by type of product? That's easy to do with The System. But, what are you going to do when there are multiple products in one catalog? Take Mallory for example. There are all kinds of products in the Mallory Short Form Catalog. With the EEM File System all you do is file the catalog under "M" for Mallory and refer to it on all of the cross reference cards that apply.

There are thousands of EEM File Systems in everyday use in engineering and procurement offices all over the world. Shouldn't you be using this proven system?

The EEM File System is shipped in one neat package. The package contains everything you need to set up your very own filing system. Best of all, it's easy to get and very affordable. Send a check or money order for $25.00 and EEM will pay the postage and sales tax. If you must use a purchase order, please add $5.00 for postage and handling. An invoice will accompany your System.

Don't waste any more time. Get organized now!

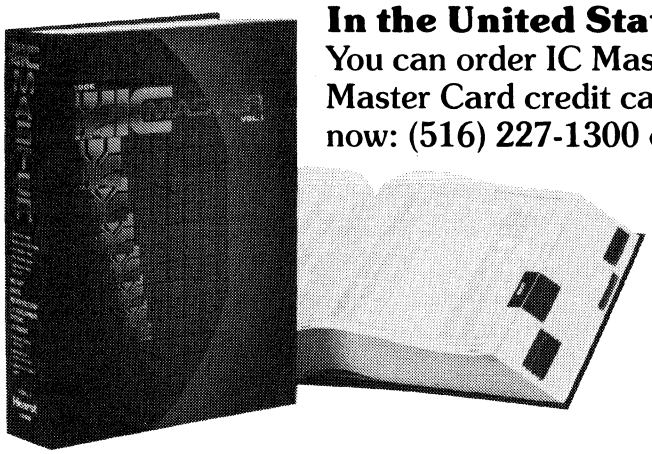
IC MASTER BELONGS ON YOUR BOOKSHELF

If you don't have your own IC MASTER, you can obtain your own copy by ordering now. Write for your own copy or order by telephone as described below.

IC MASTER is a two-volume set of technical data carefully organized to direct the engineer to the integrated circuits and related products that are closest to his specific needs. It is the surest and fastest way to find the optimum devices to answer an engineering design requirement. By ordering now, you won't have to borrow or search for IC MASTER the next time you need it.

Typical Use of IC MASTER
Can an engineer find out who makes a 256K dynamic RAM with an access time of 120 nanoseconds or faster in less than 30 seconds? He can if he turns to the Memory section of IC MASTER and looks for the 256K organization (words and bits per word) that he needs. Because each device is listed in order of access time, he can easily determine the devices that satisfy his speed requirements.



In the United States only:
You can order IC Master simply by charging it to your VISA or Master Card credit card. To place your order (USA only) call now: (516) 227-1300 or (408) 249-6800.

New Sub-Miniature Voice/Data Coupling Transformers

These transformers are ideal for applications requiring minimal use of pc board area and very low above board height. The SPT-010 and SPT-011 are both dry [ODC 600Ω:600Ω] coupling transformers with excellent performance for voice and data applications. The SPT-012 has an impedance ratio of 600Ω:600Ω with a dc current rating of 30mA for data applications. All three parts meet FCC Part 68 dielectric strength and longitudinal balance requirements.

If you can describe your custom transformer need, we can make it. And if you can't describe it in sufficient detail, we'll gladly help you. Just tell us what your application requires and rely on our 32 years experience to come up with the right solution. Although we offer over 1500 standard coils and transformers in our catalog, a major segment of our business is, and has always been, the design and production of "specials" to meet customers' needs.

Our Engineering Hotline 800-645-5828 is at your disposal, to solve any problems you may have involving coils or transformers, to discuss any transformer designs that may improve your product or lower its cost, to answer any questions you may have regarding magnetics ... at no charge to you whether you place an order or not.

Your Hotline call will be handled by an application-oriented engineer dedicated to providing the answers to your questions, not to sell you one of our products (unless it is a solution to your problem). Believe it: he'll even recommend a competitor's product if that's the right solution.

Our Hotline program has had a significant bearing on our growth over the years by helping us better understand the changing needs of you, our customer. We encourage you to take full advantage of this valuable service.

Custom Transformers AT STANDARD PRICES For Your Switching Power Supplies RL 1287

The driver, interstage, and inverter transformers in all switching power supplies should be custom designed by experts. If they're not, they're apt to be overrated, bulky, and difficult to manufacture.

Custom design, however, is usually expensive. And takes time.

That's why we developed the Renco SC&B (Standard Core & Bobbin) System, which enables us to give you custom transformers at the prices you'd pay for standards. And deliver them almost as fast as we deliver our standard products.

After extensive research, we selected six standard ferrite "E" cores which are good for most applications at all popular switching frequencies; and glass filled nylon bobbins, which have excellent rigidity and high temperature performance, and can easily be mounted on printed circuit boards.

With these cores and bobbins we can custom-design your transformers, and normally ship prototypes to you within ten days. Since we always have large stocks of cores and bobbins on hand, you'll get fast delivery on your complete order. And since we buy in volume, you're never charged a premium, even for small quantity orders.

And your transformers are wound on custom engineered equipment that ensures conformance to requirements.

Other companies have copied this system. But none offer nearly as much engineering assistance as we do. All you have to do is give us your bare specs, and we'll translate them into transformers.

And none have nearly as much experience as we do. We've been exclusively engaged in the design and manufacture of coil wound products for over 30 years. So when you come to us you can be certain that your transformers will be exactly right for your application.

Just call our Engineering Hotline (800-645-5828 outside of New York State; in New York, call 516-586-5566) and tell us your requirements. Note: a small charge may be required on some designs.

POWERSTAT® *Variable Transformers*

Epoxy-coated POWERKOTE Coils make the POWERSTAT line the most outstanding value in variable transformers today. *Without increase in price, size or weight,* only POWERSTAT Variable Transformers give an average of 20% higher current ratings, 10:1 greater overload capability, longer life, greater resistance to fungus, salt spray and other contaminating atmospheres. POWERKOTE Coil commutator bars are embedded in place preventing steady-state operating temperature and severe overloads from distorting the commutator.

POWERSTAT Variable Transformers are designed to deliver continuously adjustable voltage from a-c power lines. They introduce no waveform distortion and feature rugged construction, precious metal plated commutators, excellent regulation, high efficiency and conservative ratings. All manually operated types listed in the charts except the 10C-12 Series are available with motor drives if desired. Motor-driven speeds are 5, 15, 30 or 60 seconds for full range travel on all except types having -4, -5, or -6 suffixes which do not offer the 5-second speed. Single types in the 116C-216C, 117C-217C, 126-226 and 136B-236B Series are also offered with 3-wire cord-plug sets. 1156D-1256D Series types are available in ratings to 244 kva.

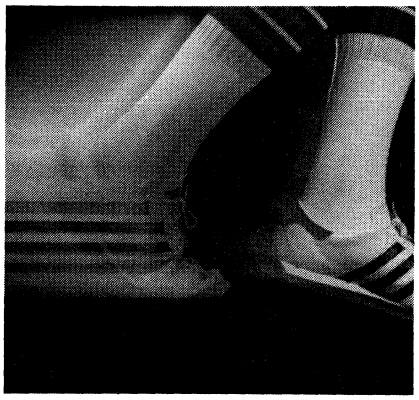
THE SIGNAL WAY OF DOING BUSINESS



PRONTO 24-Hour Shipment

We have long recognized that, in most instances, engineers and buyers need immediate delivery of transformers and chokes. To meet this challenge, Signal maintains an extensive inventory of every item in this catalog – over 1,000 different transformers and chokes. More importantly, we're dedicated to shipping out each and every order (moderate quantities) within 24 hours: and we can usually fill your entire order. We call this service "PRONTO." Last year we shipped over 20,000 such orders and we didn't disappoint anyone.

How and Why We Are Able to Maintain Our Low Price Policy

At Signal, we sell direct. There are no salesmen, or distributors – no middlemen, no extra mark-ups. We pass the savings on to you. We answer your questions directly. There is no chance of misinterpretation and you get fast, accurate answers. We maintain larger inventories than any distributors could. We're able to react to your order requirements more quickly and efficiently. These savings have enabled us to install modern machinery, specify better materials and continuously invest in new R & D. In this manner, our prices are kept as low as possible. We both profit from this policy.

Advanced Technology and Innovation

Signal has always been the leader in recognizing future trends in the industry. And we have successfully pioneered the development of revolutionary new products such as:

■**SPLIT/TRAN®** Split bobbin PC Board Transformers featuring non-concentric windings

■**FLATHEAD®** Low profile, split bobbin designs for low height and closer board stacking

■**2-4-1™ Series** Lower cost/more efficient power transformers.

All of these have subsequently become industry standards. Now we are pleased and proud to announce two new series of transformers designed to meet all international standards as well as the new, emerging generation of UL standards. Our VDE certified **ONE-4-ALL™** Series, uses dual bobbins and an insulating shroud to meet international standards. It withstands a 4,000 VRMS test voltage and gives even better isolation and performance than our previous split bobbin types. At lower cost.

The same principal has been extended to our **MORE-4-LESS™** line featured on the opposite page. Our FLATHEAD Series has been expanded to higher power levels to accommodate the demand for higher PC board power densities. All of this is renewed confirmation of Signal's leadership in setting the standards for the entire electronic transformer industry.

CUSTOM ORDERS

We also recognize that no matter how hard we try, it is impossible to anticipate everyone's needs. Therefore, we are eager to discuss and evaluate your transformer and choke requirements. If we can't recommend a standard product that will do the job and save you money and time, we'll gladly quote on your requirement. Many times all that is needed is a modification of one of our standards. Again, you will get consistently high quality and very competitive prices, whether your order is for 10 or 10,000 pieces.

We don't have anyone out in the field telling you how good we are. We have to prove it to you by deed. Thank you for considering Signal.

JIT Experts

Signal pioneered direct marketing of transformers long before the expression JIT was coined. Signal welcomes the opportunity to program JIT shipments to your most stringent production requirements.

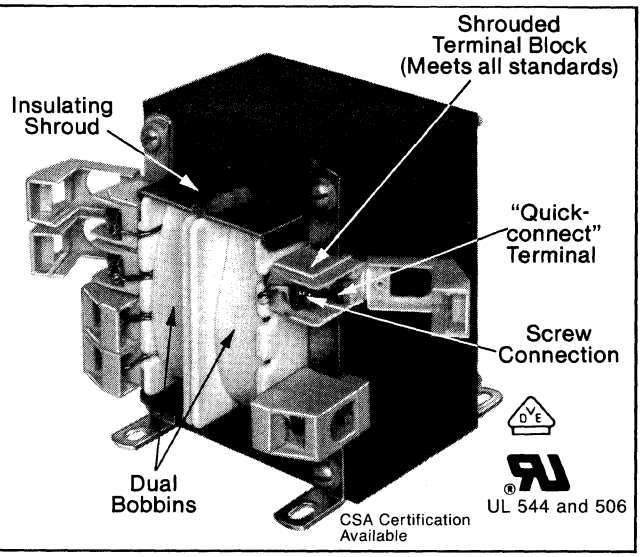
GET MUCH MORE PERFORMANCE IN LESS SPACE WITH
more-4-less™ high power transformers



Signal's M4L Line is designed with the following "ingredients":

- Grain-Oriented Low Loss, High Saturation Steel
- High Temperature Magnet Wire
- Dual High Temperature Bobbins & Insulating Shroud
- Rugged Dual Terminals (Screw or Quick-Connect) that have international approvals (VDE, IEC, etc.) **AND**
- Superior Electrical & Manufacturing Engineering meeting UL, CSA, VDE, IEC and all international standards.

Which accomplish further savings by:

- Reducing the amount of steel and copper required for a given power rating
- Eliminating hand applied tapes, pads or cross-over insulation
- Reducing winding & lead terminating time.

All of which leads to more:

- ■Efficiency
- ■Isolation (4000v RMS TEST)

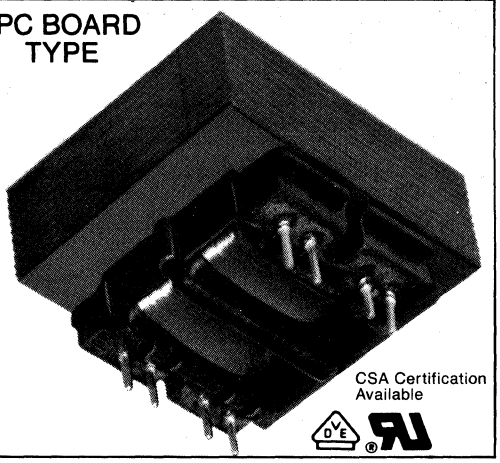
MEETS UL, VDE, IEC, CSA AND ALL COST & BETTER PERFORMANCE THAN

PC BOARD TYPE



CSA Certification Available

Signal's International Series of transformers is designed and constructed to meet all U.S. and international standards such as UL, VDE, IEC and CSA. This is accomplished by two factors:

1. The dual bobbin construction including an overall insulating shroud as indicated in the exploded view of constructional details.
2. The use of highly stable, high temperature material which more than meets UL flammability requirements.

The insulation system results in very high isolation between primary and secondary windings and from either to the core (or ground). **Hipot Test is 4000v RMS.** The dual bobbin non-concentric design reduces capacitance and eliminates the need for an electrostatic-shield.

These parts are available in both PC Board and Chassis Mount types from 2.5 to 175 va. Coil winding and wire termination are simplified by the bobbin construction and the method of winding. The dual windings, when possible, are wound "bifilar" so that **all anchor and insulating tapes are eliminated.**

Also, since the windings are electrically balanced, there are no primary circulating currents and, if the secondaries are series-connected for a FWCT rectifier, the balance makes filtering easier.

The bobbin wall slots allow for all leads to be brought out of the winding area for termination. As a result, **all wire crossovers and insulating pads are eliminated.** The insulating shroud positions both bobbins accurately for core stacking and also provides the barriers for the 4000v RMS Test Voltage.

These design improvements lower manufacturing costs. As a result, the series is truly universal and can be sold at lower prices than previous "split bobbin" and "PC" types.

Again, Signal is there first – with the best – and at lower cost.

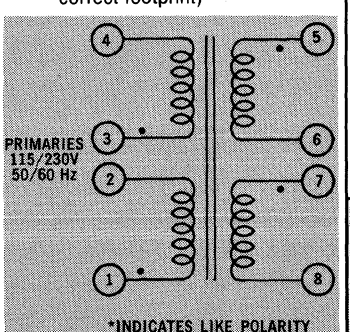
Signal expanded its Flathead® Series because of the trend toward higher power usage on PC boards. Two larger sizes (24 and 48 VA) are now available.

Basic design, layout and construction specifications have not changed. The only exception is that more rugged plug-in pins, using square wire, have been incorporated in order to properly handle the weights and currents required.

(See mechanical drawing for correct footprint)



Regulation of size 2 and 6 units is 30%; size 12 units is 20%; size 24 and 48 units is 15%; i.e., no load-secondary voltage is 15% higher than full load.

LOW PROFILE: Allows ¾″ card spacing for 2.5va units, 1 inch card spacing for 6va units, or 1¼″ inch card spacing for 12va units, 1½″ inch card spacing for 24va and 1⅝″ inch card spacing for 48va.

DUAL PRIMARIES: 115/230v, 50/60 Hz.

NON-CONCENTRIC WINDING: Where secondary is wound alongside primary rather than directly over it. This added isolation reduces inter-winding capacitance and **eliminates the need for an electro-static shield.**

1500V. RMS HIPOT: Is standard because of the advantage of non-concentric windings.

HUM-BUCKING CONSTRUCTION: (Semi-toroidal) results in reduced radiated magnetic field and balanced windings.

The LP line of transformers is ideal for low height, critical pc board power applications in semi-conductor control and instrumentation. They are used extensively in single or dual output dc supplies and isolated control circuit and reference supplies.

"Split-Tran" transformers combine the best features of our "2-4-1" Series and Signal's pioneering line of pc board miniature transformers.

The use of a "split bobbin" allows the primaries and secondaries to be wound non-concentrically, i.e., side by side rather than one over the other. This results in cost savings and superior performance, namely:

- High isolation — **2500V** hipot is standard.
- Low capacitive coupling — no electro-static shield necessary.
- Less manufacturing time — no cross-overs of primary and secondary leads.
- PC pins — allow direct insertion in PC boards.
- Class S insulation — 130°C.

Each transformer is available with single 115V or dual 115/230V primaries. In addition, secondaries are split so that they can be series or parallel connected.

Special variations will be quoted and shipped promptly.

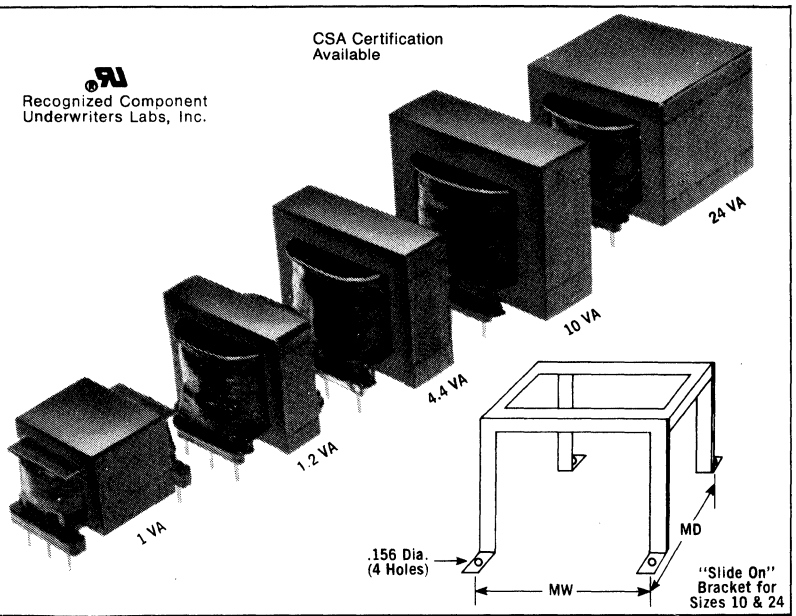
. . . for printed circuits applications

Signal has the most complete and diversified selection of miniature plug-in power transformers.

Primary ratings of 115V (Style PC - 6 Pin) or Dual 115/230V (Style DPC -8 Pin) are standard for the entire line. 1500V. Hipot is standard.

Size 1.0 is used extensively where height is a limiting factor since its height of 0.83 inches allows 1 inch spacing of PC boards. Size 24 is unusual since 24 watt PC transformers are not readily available, especially with a height of 1⅜ inches.

The RMS current ratings are based on a load regulation of 15-20% and not on temperature rise (except for the largest item, size 24). Therefore, these ratings may be exceeded without overheating, if the additional drop in full load voltage is acceptable. There is, of course, a limit and it would be best to check with our engineering department on specific units.



BLACK DOT ON LABEL INDICATES POSITION OF TERMINAL #1.

METHOD OF DETERMINING SECONDARY CURRENT RATINGS

The secondary currents shown in the tables are RMS ratings. Depending upon rectifier circuit configurations, the RMS secondary current is different than the DC output current. This is indicated in the chart below:

Rectifier Type	Filter Type	RMS Secondary Current Is
Full Wave Center-Tap	Choke Input	= 0.7 x DC Amps
Full Wave Center-Tap	Capacitor Input	= 1 to 1.2 x DC Amps
Full Wave Bridge	Choke Input	= DC Amps
Full Wave Bridge	Capacitor Input	= 1.6 to 1.8 x DC Amps

For example, in a F.W. Bridge circuit with a capacitive filter, if the load is 1 Amp DC, the RMS Secondary current is 1.6 to 1.8 Amp RMS.

cut size and weight with "2-4-1"™ . . . .

The 2-4-1 series is an illustration of the use of creative design applied to small power transformers. The result is a line where, for a given va rating, size and weight are reduced almost 50%. Hence the name "241" series.

- GRAIN ORIENTED CORE — High Saturation Density — Lower Core Loss — Less Steel and Copper.
- BOBBIN WOUND — Maximum Utilization of Winding Area — Space and Size Reduced.
- SPLIT BOBBIN — NON-CONCENTRIC WINDING — Lower Capacitance — Better Insulation — 2500V RMS Hipot — No need for Electro-Static Shield — High Isolation and Insulation Resistance. No Cross-Overs of Primary and Secondary Leads.
- SPECIAL TERMINAL — Solder or Quick-Connect.

The series is available with single 115V or dual 115/230V primary, rated 50/60 Hz. Class S insulation is used for a maximum total temperature rating of 130°C continuous.

p.c. board transformers for triple-output regulated supplies

IDEAL FOR MICROPROCESSOR APPLICATIONS

"MP" types have been developed specifically for use in triple-output regulated DC supplies that are commonly used in **Microprocessor Circuits** and other logic, op-amp combinations. Two output combinations have been provided, namely 5V and ±12V, and 5V and ±15V.

All "MP" units are rated in terms of the final **DC** output after a standard three terminal IC regulator. They are designed to provide these outputs with AC line inputs of 100 to 130V 50/60 Hz (or 200 to 260V for nominal 230V lines).

Two basic mechanical configurations are available. Standard PC types (MPC or DMPC) are tested to pass 1500V RMS hipot. Optional mounting brackets are available. MPL types are based on Signal's "flat-head" style and feature low profile, 115/230V primaries, hum-bucking construction, 1500V RMS hipot and the advantages of non-concentric winding (low inter-winding capacitance, high isolation, and no need for an electro-static shield).

All MP's are stocked in depth for immediate delivery. In addition, special variations can be supplied with reasonable delivery times.

BLACK DOT ON LABEL INDICATES POSITION OF TERMINAL #1.

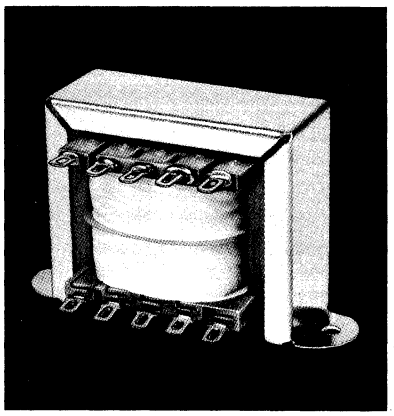
"2-4-1"™ style split-bobbin transformers for triple-output (μp) applications (type MT)



Signal has extended its line of triple-output transformers for microprocessor applications with three new sizes rated to 100VA (35 watts DC regulated). Similar to the split-bobbin design used in Signal's "2-4-1" series, the chassis-mounted style allows for these new higher power applications.

Two output combinations are provided: 5V and ±12V; and 5V and ±15V. Designated "MT" (single primary) and "DMT" (dual primary), these transformers are rated in terms of the final DC output after a 3-terminal IC regulator. They are designed to provide these outputs with AC line inputs of 100-130V, 50/60 Hz (or 200-260V for nominal 230V lines). All auxiliary components required to complete the DC supply are tabulated.

All MT types are stocked in depth for immediate delivery. In addition, custom variations can be supplied with minimal turnaround time.

Items shown in shaded area are not normally in stock. They are standard designs generally available in 3-4 weeks.

All transformers are designed conservatively and are rated for 50/60 Hz. Only prime raw materials are used. Units are thoroughly impregnated and baked with Signal's own high gloss varnish. The transformers and chokes are rugged in construction, well insulated, and have a consistently uniform appearance. All ratings are at full load current continuous operation. Hipot rating of 1500V RMS is standard.

Electrical ratings have been chosen to cover a wide range of applications. All transformers have two center-tapped secondary windings, which may be series or parallel connected as indicated in rating chart.

*The secondary currents shown in the tables are RMS ratings. Depending upon rectifier circuit configurations, the RMS secondary current is different than the DC output current. This is indicated in the chart below:

Rectifier Type	Filter Type	RMS Secondary Current Is
Full Wave Center-Tap	Choke Input	= 0.7 x DC Amps
Full Wave Center-Tap	Capacitor Input	= 1 to 1.2 x DC Amps
Full Wave Bridge	Choke Input	= DC Amps
Full Wave Bridge	Capacitor Input	= 1.6 to 1.8 x DC Amps

For example, in a F.W. Bridge circuit with a capacitive filter, if the load is 1 Amp DC, the RMS Secondary current is 1.6 to 1.8 Amp RMS.

filter chokes

1.0 TO 200 AMPS

Signal's line of filter chokes is the most extensive available. It is designed to complement the selection of Rectifier Power Transformers so that a set may be specified for power supplies using inductive filters.

The inductance ratings given are minimum values guaranteed at full DC current. All resistance ratings are maximum values. Special variations or intermediate values of inductance, current, or resistance can be supplied promptly and accurately.

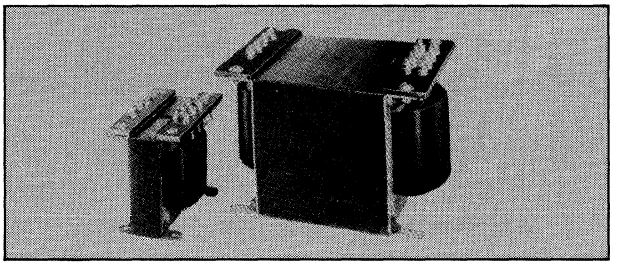
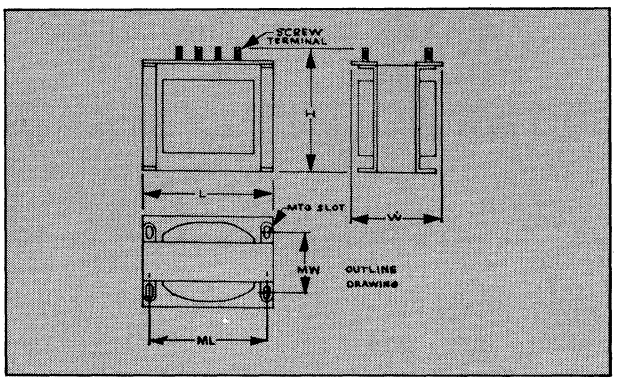
power isolation transformers

INDUSTRIAL GRADE/STEP-UP OR STEP-DOWN. MANY POSSIBLE VOLTAGE RATINGS.



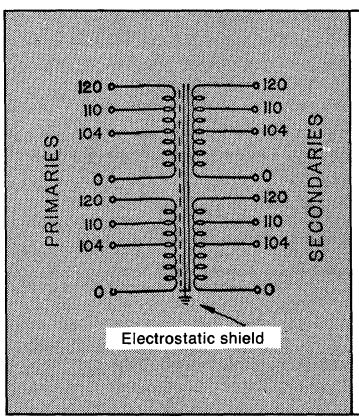


AVAILABLE FROM STOCK FOR IMMEDIATE SHIPMENT

The "DU" and "SU" lines are designed for a maximum of 55°C rise above ambient for use on standard power lines from 50 to 500 Cps. Only prime raw materials are used. Units are thoroughly impregnated and baked with Signal's own high gloss black baking varnish. The transformers are rugged in construction, well-insulated and have a consistently uniform appearance. All ratings are at full load current, continuous operation. 2500V. RMS Hipot is standard.

Heavy ¼ inch phenolic terminal boards are provided with plated brass screws and flat washers (10-32 on ¼ and ½ KVA, ¼-20 on larger sizes). Connections can be easily made with a nut driver. It is also simple to alter the interconnections to change transformer ratings. **Electrostatic shields are provided grounded to the core.** The connection is made with a lug to ground and may be opened if an ungrounded shield is desired.

DU SERIES 110/220 Dual Primary to 110/220V. Dual Sec. (Primary & Secondary may be reversed)



As shown on the schematic diagram the "DU" line is designed with dual primaries and secondaries. All four windings are identically rated at 0/104/110/120 volts. This permits series or parallel connections on either primary or secondary. Therefore, a nominal 110 to 110 volt, 220 to 220 volt, 110 to 220 volt, or 220 to 110 volt transformer can be set up. The winding taps permit intermediate series ratings such as 208, 214, or 230 volts. It is also possible to make auto-transformer connections by connecting a primary group in series with a secondary group. Such nominal ratings as 440 to 220 volts or 220 to 440 volts can be set-up, in addition to the standard ratings described above. A further advantage to auto-transformer connection is the fact that the KVA rating of a particular type is doubled.

TOROIDAL COMPONENTS TECHNICAL INFORMATION

IN-RUSH CURRENT

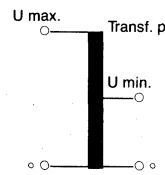
Due to the lack of air gaps, toroidal components generally have a higher in-rush current than normal transformers. For main fuses we recommend the use of slow blowing types, especially for output power rates in excess of 500 VA.

FREQUENCY RANGE

TALEMA power transformers may be designed for international operating frequencies and operate up to 450 Hz maximum. With increasing frequency, the transformer size decreases accordingly. Core materials for frequencies up to 100 KHz are available in materials such as thin tape wound nickel alloy, molded powder cores or sintered ferrite.

AUTOTRANSFORMERS

An autotransformer allows smaller dimensions and a more economical overall design in cases where galvanically separated windings are not required.



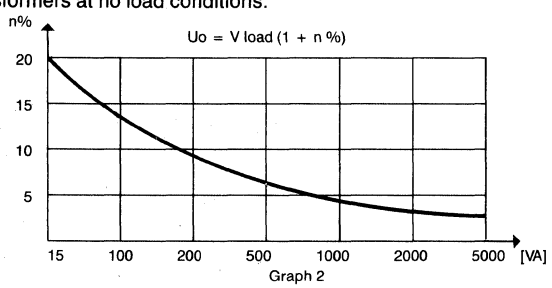
$$= P\,out \frac{U\,max. - U\,min.}{U\,max.} [VA]$$

P out = Output Power [VA]

$$Optimum\ Size = \frac{U\,min.}{U\,max.} < 0.5$$

VOLTAGE DROP

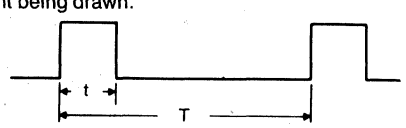
The secondary voltages and currents are valid as shown on page 4 for normal output power. At partial load the output voltage, as a function of transformer size, will be accordingly higher. Graph 2 shows the percent of voltage increase for standard toroidal transformers at no load conditions.



Graph 2

DUTY CYCLE

A smaller transformer can be used if the load is intermittent. Because the output power in this case significantly exceeds the nominal power, the secondary voltage drops below the voltages shown on page 4. The voltage drop increases proportionately with the current being drawn.

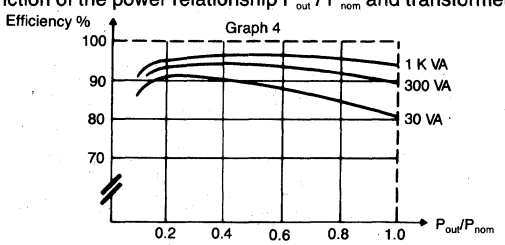


$$P\,out \leqslant P_{nom}\sqrt{\frac{T}{t}} [VA]$$

T ≪ than heat sink coefficient

EFFICIENCY

Graph 4 shows typical efficiency which can be expected as a function of the power relationship P_{out} / P_{nom} and transformer size.



TEMPERATURE RISE

TALEMA toroidal components are designed for a temperature rise of 25°C to 45°C at full load. Designs are available which employ higher temperature rise above ambient. Heat sink, mounting configuration, load duty cycle and ventilation are important considerations.

RECTIFYING

Figures 5 and 6 give formulas for calculation of approximate values of the transformers and are primarily dependent on the size of the loading capacitor to be used. The applied form factor "F" is rated between 1.1 for smaller capacitors, up to 2.5 for relatively larger capacitors.

FILTER CHOKES

Switched power supplies allow small size with high efficiency and stabilized output. Switching regulators use a load coil for interim energy storage. The use of powdered iron cores for this purpose gives excellent efficiency and outstanding alternating field modulation along with the possibility of an extensive constant inductivity over a wide, varying bias current. Additionally, powdered iron cores give outstanding results in ringing choke applications and in filter circuits requiring small dimensions and high "Q," with operating frequencies of up to 300 kHz.

GET ORGANIZED!

Are your catalog files organized? Can you find any given catalog in a matter of seconds? If your answer is "Yes," you probably already have the EEM File System. But, if you said "No," you really ought to look into this simple system. It will save hours of time and tons of aggravation.

The EEM File System was invented over twenty-five years ago to help people who specify, buy, or work with electronic products and equipment. It is upgraded on a constant basis to reflect the current state of the art. It's easy to use and easy to customize to your particular needs.

You say you want to file catalogs by type of product? That's easy to do with The System. But, what are you going to do when there are multiple products in one catalog? Take Mallory for example. There are all kinds of products in the Mallory Short Form Catalog. With the EEM File System all you do is file the catalog under "M" for Mallory and refer to it on all of the cross reference cards that apply.

There are thousands of EEM File Systems in everyday use in engineering and procurement offices all over the world. Shouldn't you be using this proven system?

The EEM File System is shipped in one neat package. The package contains everything you need to set up your very own filing system. Best of all, it's easy to get and very affordable. Send a check or money order for $25.00 and EEM will pay the postage and sales tax. If you must use a purchase order, please add $5.00 for postage and handling. An invoice will accompany your System.

All MET series transformers and MEI series inductors are designed and constructed to meet the requirements of MIL-T-27. They feature a molded case construction with base mounting pad for easy inspection of solder joints; high strength gold plated nickel leads which meet a 2.0 1b on axis of pin terminal strength; and weight of less than 3.0 grams. These transformers offer exceptional performance characteristics for use in all high performance impedance matching circuits requiring miniature magnetic components; including input, interstage, isolation, and output circuit applications.

DP SERIES ENCAPSULATED AUDIO TRANSFORMERS

The **DP SERIES** of encapsulated audio transformers are cost effective for applications involving severe environments. Completely encapsulated, these small audio transformers eliminate environmental and board washing problems associated with open style transformers. The environmental quality of the **DP SERIES** is established through testing for humidity, immersion, solvent resistance and temperature cycling to the exacting reqirements of MIL-T-27. Several part numbers meet the requirements of **FCC PART 68** for telephone or modem applications. All **DP SERIES** audio transformers have frequency response characteristics within ±2dB from 200 Hz to 20 KHz.

VARIAC® VARIABLE AUTOTRANSFORMERS

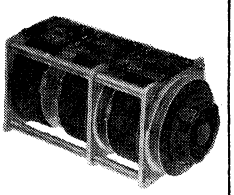
The industry standard for performance and reliability. 700 models and more than 1,000 variations to 'spec'. Overloadable to 1000% short term with output from 0 to line or above line voltage despite load size or power. Single and 3-phase models, manual and motor driven, 120 to 480V outputs. Militarized "400Hz" units also offered.

SINGLE PHASE VARIAC® AUTOTRANSFORMERS

In 120, 240, 480 V inputs, 50/60 Hz, many with UL and CSA listings and from 2.0-300.0 Amps. Choose from fully enclosed or open designs, in single phase or three phase configurations, 50/60 Hz and 400 Hz models. Connectable in parallel or series and single line.

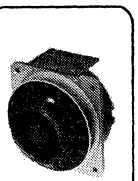
MANUAL 3-PHASE GANGED VARIAC® AUTOTRANSFORMERS

Control 3-phase power requiring 208, 240 or 480 V inputs. These Variacs come in 208, 240 and 50/60 Hz ratings and in 7.1, 8.5 and 10 Amps. 29 other units permit overvoltage use on an open Delta connection. 14 other models are Y connected. Ball bearings are also included.



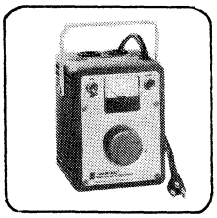
MILITARIZED "400 Hz" VARIAC® AUTOTRANSFORMERS

For ruggedized use from 350 to 1200 Hz. With excellent regulation, smaller and lighter than 60 Hz units, they conform to most mil-specs for harsh environments. Single Phase and 3-Phase configurations.



PORTABLE VARIAC® AUTOTRANSFORMERS

Metered, encased and available in 20 models featuring an autotransformer and overload protection. Some have Voltmeters, Ammeters, and Wattmeters. 120 V and 240 V models to 18.0A; 2 and 3 wire versions also offered.



MOTOR DRIVEN VARIAC® AUTOTRANSFORMERS

More than 60 motor driven models, single or ganged. Motors are fully enclosed, 2 phase, gear-reduction, servo types with motor speeds of 2, 4, 8, 16, 32, 64 and 128 secs at 60 Hz. All have ball bearings and adjustable limit switches.

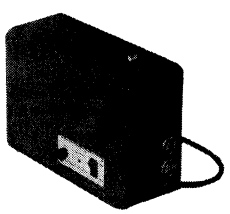
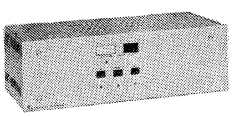
VARIAC® AUTOMATIC VOLTAGE REGULATORS

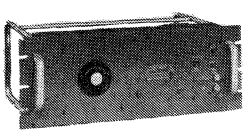
Encourage peak performance and protect your equipment with Variac Voltage Regulators. Offering smooth control and fast response, they function up to 10X the rating for transient surges. They will not introduce distortion or noise, and will offset brownout effects. Choose from five basic models plus 100 custom variations.



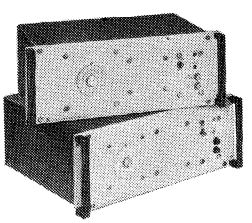
TYPE 1591
Compact 1 kVA with 115 V ratings. Low cost, small and available in portable and rack mounted models.



TYPE 1592
Provides proper voltage for long term operation — remotely programmable. In 2 models, capacity to 5.3 kVA, handle 120-480 V and are used in single and three-phase applications.



TYPE 1571
Militarized, in 4 models, for use where shock or vibration is encountered. Available in 400 Hz or 50/60 Hz with 115 V outputs, rack mountable. 5.8 kVA.



TYPES 1581 and 1582
High capacity. Automatically compensate for line voltage fluctuations. 115 V and 230 V models, 19.7 kVA capacities. For industrial and lab use e.g. computers, transmitters and critical processes.

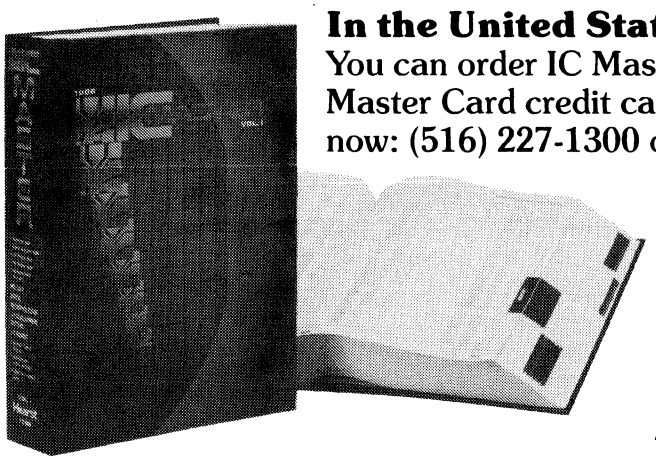
IC MASTER BELONGS ON YOUR BOOKSHELF

If you don't have your own IC MASTER, you can obtain your own copy by ordering now. Write for your own copy or order by telephone as described below.

IC MASTER is a two-volume set of technical data carefully organized to direct the engineer to the integrated circuits and related products that are closest to his specific needs. It is the surest and fastest way to find the optimum devices to answer an engineering design requirement. By ordering now, you won't have to borrow or search for IC MASTER the next time you need it.

Typical Use of IC MASTER
Can an engineer find out who makes a 256K dynamic RAM with an access time of 120 nanoseconds or faster in less than 30 seconds? He can if he turns to the Memory section of IC MASTER and looks for the 256K organization (words and bits per word) that he needs. Because each device is listed in order of access time, he can easily determine the devices that satisfy his speed requirements.



In the United States only:
You can order IC Master simply by charging it to your VISA or Master Card credit card. To place your order (USA only) call now: (516) 227-1300 or (408) 249-6800.

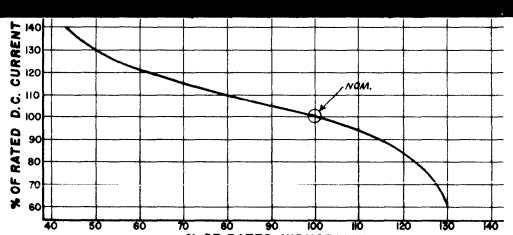
HIGH CURRENT CHOKES — 50/500 HERTZ | DIMENSIONS REFER TO HIGH CURRENT XFMR SKETCHES



- **Matching styles complement high current transformers**
- **Wide variety of compatible current ratings**

INDUCTANCE VARIATION

Graph indicates typical variation of inductance (%) when used at D.C. currents (%) other than the rated values.

Chokes operated at D. C. currents higher than rated value must be run on an intermittent basis to avoid overheating.

CUSTOM DESIGN

CUSTOM MADE TRANSFORMERS from 20VA to 5000VA for 60 Hz or 50/60Hz operation with UL family recognition. The table on the next page lists maximum data for custom made transformers using our standard core sizes. Other core sizes are available. Custom made transformers are often a preferred choice for optimized technical performance. For certain applications, custom design is also a cost saving alternative to standard transformers.

STANDARD OFF-THE-SHELF

STANDARD TRANSFORMERS UL recognized, for both 117V/60Hz and 115/230V 50-60Hz, 26VA-1000VA power range. All types are available from stock in Bowie, MD. (See separate page A•2515.)

We also offer **transformer kits** with factory made primary windings in sizes from 80VA to 1400VA. A line of **multi-voltage rectifier transformers** for 5V and ± 15V regulated DC are also stock items. (See separate page A•2416.)

TOROID CORPORATION OF MARYLAND OFFERS

Over 15 years of experience from design and manufacturing toroidal power transformers.

Computerized transformer design.
For rectifier transformers we use proprietary software to calculate and optimize the design to meet the DC-data required after your rectifier circuitry.

UL recognized construction including UL544 Medical Standard. UL recognition of custom designs can be obtained quickly under our UL family recognition.

Our transformers are built to meet basic requirements of IEC, VDE, CSA and other foreign safety agencies.

THE FACTORY

TOROID CORPORATION OF MARYLAND started its operation in late 1982. The rapid growth of the company and its early position as the market leader was made possible by design and manufacturing technology transferred from its Swedish affiliate Toroid Transformator AB. The U.S. operation occupies a modern 10,000 sq. ft. plant in Bowie, MD. 20 miles east of Washington DC.

QUALITY

To ensure that our customers will always receive the ultimate design solution and the highest quality workmanship, the two factories maintain close cooperation for evaluation of design and manufacturing processes. In-house production engineering is continuously working on development of new manufacturing equipment.

With our proprietary software programs, we can quickly and accurately design transformers for rectifier loads without approximations . . . . Thus we guarantee that a prototype will meet specified DC data the first time.

Winding our own cores of grain oriented silicon steel is another important step we have taken to have full control of every aspect of our manufacturing process.

SAFETY PARAMETERS

COMPLIANCE WITH SAFETY STANDARDS

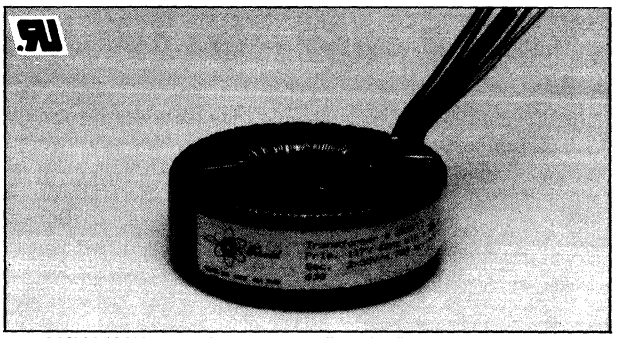
Our basic program of transformers is UL recognized to UL standard 1411. Transformers for medical applications, recognized to UL 544 is one of our specialties. Our transformers are designed and built to meet the basic standards of IEC, VDE, CSA and other foreign safety regulatory agencies.

INSULATIONS

To meet the stringent safety requirements for transformers, we use only UL recognized insulation material. Our transformers are constructed with reinforced insulation, which allows the transformer to be used without grounding. All our transformers are 100% hi-pot tested at 4000V rms for 2 seconds and have a minimum creep distance of 8 mm.

TEMPERATURE CONSIDERATIONS

Operating temperature is another important safety factor. Our transformers, built for Class A (105°C) operation, are normally calculated for a temperature rise of 60°-65°C. Actual increase will depend on how and where the transformer is mounted and how well it is cooled.



360VA/60Hz transformer — 4.5″ × 2.3″H Weight = 5.3 lbs

APPLICATION NOTES

Our engineering staff has written three application notes (Transformer Facts):

- Bulletin #1—Form Factor and Size of Rectifier Transformers
- Bulletin #2—Supply Voltage and Primary Windings for Power Transformers
- Bulletin #3—Fuses and Overload Protection of Transformers

We will be glad to send you any of these free of charge.

SUPERIOR Toroid® TRANSFORMERS

TOROIDAL POWER TRANSFORMERS

AVAILABLE DESIGN OPTIONS

ULTRA-LOW MAGNETIC STRAYFIELD EMISSION DESIGN

Our standard design considerably reduces the strayfields in comparison with a laminated transformer. For sensitive applications, our optional Ultra-low Strayfield Design, achieved through a special process, further reduces the emission. In applications such as high resolution CRT displays, a magnetic shield around the circumference of the transformer can be added to allow even lower emission levels.

STATIC SHIELDING

Static shielding may be required to minimize capacitive coupling between primary and secondary winding when the transformer is used in an extremely noisy environment. Since the shield adds layers, a larger core size may be necessary to provide adequate inside diameter for the shuttle of the winding machine.

LEADS AND CONNECTORS

Standard is 8" long flying self-leads. Other lead lengths, multi stranded leads, and mounted connectors are options.

MOUNTING METHODS

MOUNTING WASHER

The normal mounting method of our transformers is using a metal washer and two rubber pads, furnished at no extra charge.

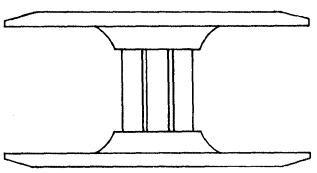
MOUNTING WASHER

POLY-MOUNT

Our new **Poly-Mount** is an option and replaces the standard metal washer and rubber pads for transformers with power ratings up to 600VA. The Poly-Mount is shipped as an integral part of the transformer and will reduce the mounting time of the transformer. If required, the Poly-Mount can be removed from the transformer. The Poly-Mount consists of two parts made of UL recognized Polyamide with high temperature rating. A screw through the center hole holds the assembly to the chassis. The Poly-Mount adds slightly to the total height of the transformer.



POLY-MOUNT

OMEGA BRACKET

For applications when vertical mounting is preferred, our **Omega** bracket is available with or without UL listed terminal blocks. It provides firm support for the transformer without any significant increase of size and weight. The bracket is made of yellow chromated steel welded onto a stand with slots for screw mounting. A large part of the transformer surface is exposed to the surrounding air, allowing for maximum cooling. The Omega bracket is available for transformers up to 3800 VA.

POTTED CENTER

For large size transformers, 15 lbs or more, or when the washer may cause height problems, we recommend Epoxy potting of the center hole. The top of the potting will be recessed to accommodate the screw head. A flat bottom of the potting is available upon request.

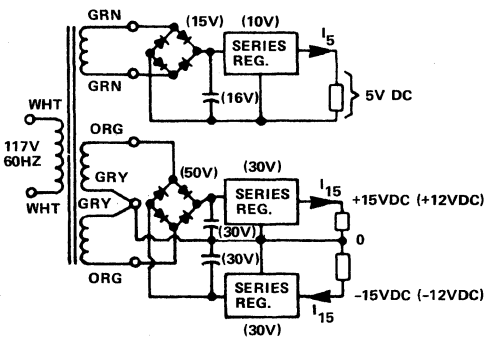
These transformers are designed to work with user-provided components per schematic shown. Note that the rated operating voltage for each component must be larger than the voltage shown in the diagram, and diodes and regulators must be rated to handle the DC current actually used. Capacitor sizes should be at least 7,000 μF per ampere DC used.



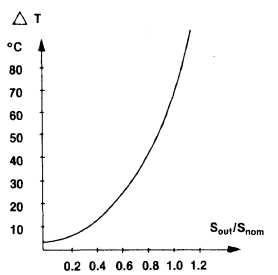
DESIGN DATA AND APPLICATION NOTES

A custom designed transformer is usually based on a standard core with appropriate power rating. Data for TOROID standard cores are shown on page A•2415. Special cores can be manufactured to meet unusual requirements, e.g. extremely low profile designs.

Temperature rise.

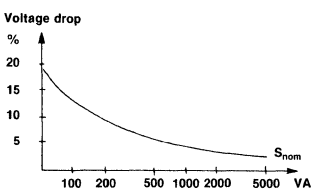
Our transformers are typically designed for a temperature rise of 60°C over ambient at full load. Using a larger core size will reduce the temperature rise due to the small core losses (in comparison with a laminated E/I core). The temperature rise will drop drastically when the output power is reduced. At half the load the temperature rise will only be approximately 25% of the rise at full load.

The figure shows how the temperature rise varies with the actual output power (S out) in relation to nominal power (S nom) for a given core size.



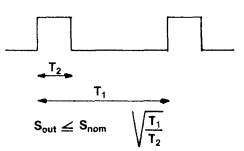
Voltage drop.

Figure 2 shows voltage drop at full load for standard cores at 50/60 Hz. The voltage drop is slightly higher for a 60 Hz transformer. A design with an oversized core will reduce voltage drop and temperature rise.



Duty cycle.

A smaller transformer can be designed if the load is not constant and the duty cycle is much shorter than the transformer's thermal time constant (which has the magnitude hours). Note that the voltage drop increases linearly with the instantaneous current.



Efficiency.

Figure 4 shows typical curves for efficiency as a function of output power in relation to nominal output power for different core sizes.

TRANSFORMERS

SUBMINIATURE AUDIO TRANSFORMERS

LT & LS SERIES
LU SERIES

The LS Series is electrically and mechanically the same as the LT Series except for phase relationships between terminals.

LS, LT, and LU Series transformers have successfully passed the rigid requirements of MIL-T-27, Class S, Grade 5.

Subminiature in size, weighing less than 0.1 ounce, these transformers have tenth inch grid spacing between terminals and are ideally suited for transistor circuit applications which utilize printed circuit board design. All three series have risers on mountng surfaces to facilitate inspection and board cleaning and also to prevent moisture traps.

A wide range of standard designs are available which meet the requirements of most common applications and allow for rapid delivery of prototype quantities. Special designs are also available in all three types.

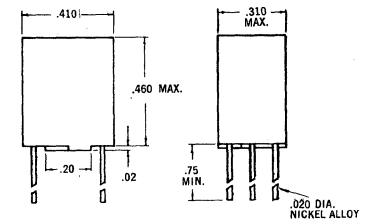
The new LU Series exhibits the same electrical characteristics as the LS and LT Series but has been packaged in a "thin line" configuration to allow for closer board spacing for "card cage" applications or where height dimensions are critical.

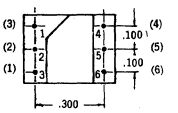
MAGNETIC SHIELDING

LS, LT and LU Series transformers are available with magnetic shields.

To order transformers with shields installed, add 500 to dash numbers shown in the table below. For example: to order an LS-22 with shield, specify LS-522.

LS/LT SERIES

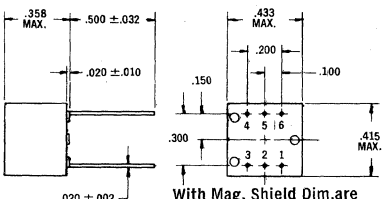




WT. 0.1oz

With Mag. Shield Dimensions are .365 Max. x .465 Max. x .531 Max.

LU SERIES



With Mag. Shield Dim.are .448 x Max. x .494 Max. x .400 Max.

Mech. Tol. = ±.010 unless indicated.

SUBMINIATURE AUDIO TRANSFORMERS

Torotel LA and LB series transformers are manufacturered to MIL-T-27, Grade 5, Class S specification. These series have 0.1 grid spaced terminals for printed circuit application. Both types have risers on mounting surfaces to prevent the formation of moisture traps and to facilitate cleaning of board assemblies.

The LA Series is electrically the same as the LB Series, but is packaged in a .460 inch cube with smaller outline dimensions for application where this configuration is more suitable.

Leads are made of 20 AWG tinned copper. Units utilizing Dumet wire are available on special request.

Switch-Mode Components Selection Guide

UTC answers your special inductive requirements by providing you with the most recent technology. With the addition of the CMA, B, C series common-mode inductors and PS series inverter transformers to our SR and LL lines, we now offer a complete line of components for use in SMPS equipment operating in the 50-100 KHz range. The creation of these lines is another part of UTC's commitment to serve as the one-stop center for all your inductive needs.

These components are suitable for all switch-mode applications — input filtering, output filtering, EMI suppression and interstage voltage transformation. Included are components for both common-mode (CMA, B, C) and differential mode (LL, SR) filtering. Some of the devices have multiple applications, such as the CMA, B, C inductors which can be used as high-frequency matching transformers.

Regardless of the application, each of our SMPS devices will meet or exceed your reliability requirements. All part numbers are MIL-type and some can operate in Class V environments. Many components are PC mounting style, the larger units featuring a stud for adding stability.

The SMPS line's performance is unmatched. These small, low profile packages disguise unusually high power-handling abilities, giving you exceptional "power density" along with high-frequency capability. Special winding techniques keep leakage inductances low and yield excellent voltage stability with frequency change.

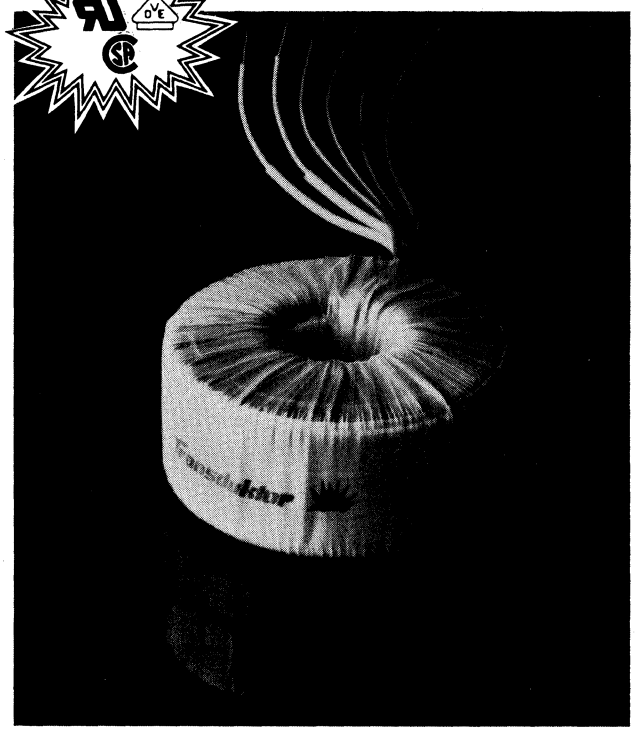
Ulveco

Toroidal Power Transformers



Low Weight
Typically 50% lighter than traditional stacked lamination transformers.

Small Dimensions
Low height profile allows slim, compact design of electronic equipment.

Flexible Dimensions
The Ulveco Toroidal Power Transformer can be "modeled" to fit very limited spaces and still conform to your electrical requirements.

Easy To Mount
Just one center screw easily and quickly mounts the Ulveco Toroidal Power Transformer to the chassis.

Low Magnetic Strayfield
No air gap and with primary and secondary windings evenly spread around the core, resulting in a very low radiated magnetic field.

Low Mechanical Hum
A single continuous strip of steel tightly wound into a roll results in a very solid and stable unit. No loose parts to buzz.

Small No Load Losses
Ulveco Toroidal Power Transformers can reduce open circuit power by 90% compared to traditional stacked lamination transformers.

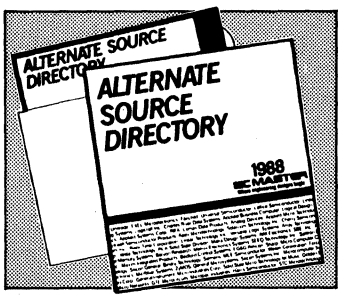
HEARST ENGINEERING SOFTWARE

ICMASD...IC Alternate Source Directory

If you've used the IC MASTER, you know what the Alternate Source Directory is. Engineers tell us that it's one of the most valuable sections of the Master. The Alternate Source Directory...ASD...is now available in floppy disk form.



The electronic ASD is FAST! Just ask a question and the answer pops up in a split second.

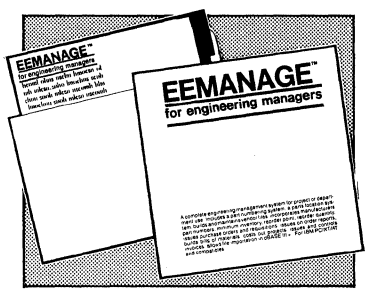
The electronic ASD is FLEXIBLE! You can add ICs and you can add comments.

You can add part numbers, prices, technical notes or anything else you like. You can customize the ASD to fit your needs and the needs of your company.

Order the 1988 Alternate Source Directory for your AT, XT or compatible. We'll send you two floppies and a very simple piece of printed documentation. Download the floppies and you're in business. All you need is a hard disk.

EEMANGE...for engineering managers

Developed by the publishers of EEM/ Electronic Engineers Master, EEMANAGE is a software program designed to make life easier for engineers and engineering managers.



EEMANAGE does many things: 1. Develops Bills of Materials 2. Assigns Part Numbers logically 3. Manages Engineering Inventories 4. Issues Purchase Requisitions 5. Relieves Engineering Inventories 6. Manages a Parts Storage System 7. Issues Engineering Change Notices 8. Interfaces with dBaseIII+ Programs.

EEMANAGE is completely menu driven. It is simple to understand and operate. Any competent secretary can be up and running on EEMANAGE in minutes.

Order EEMANAGE for your AT, XT or compatible. We'll send you one floppy and brief, very user friendly documentation.
